The Editor's Column -

Autumn '73 in Auburn

By Kaye Lovvorn '64

Fall Quarter, 1973, will probably be over when this *Alumnews* arrives at last in your mailbox. It has been a busy fall—the town bustling with 15,705 students (5,922 women and 9,783 men, making that ever-narrowing ratio of men to women now 1.65 to 1.0) during the week and bursting with thousands of football fans who arrive by the car- and busload during the week-ends.

Auburn's increased enrollment contrasts with a national trend. Many colleges—state as well as private—found decreasing numbers of students at their doors this fall, a result attributed to the ending of the draft and the fact that a degree is no longer the job insurance of the past.

For the first time this fall, Auburn accepted students on a quota system based on academic program rather than sex, and as a result the number of women in the freshman class is up slightly. (In years past, Auburn admitted 1,500 freshmen men and 1,000 freshmen women.) Applications are now being accepted for the class of '78 and the quota system depending on field of study rather than sex will continue to be used.

Bicycles Add New Snarls

Also increasing at Auburn is a new traffic problem caused by the bicycle—easily apparent as one is almost run over by, or almost runs over, a bicycle at every other corner. Bicycle lanes appeared on the campus and in town between quarters, but remain sadly insufficient for the hundreds of bicycles and dozens of routes they travel.

The old discrepancy between the number of cars and spaces to park them grows ever wider, making a parking place a thing to be prized—even by those with the revered "A" (faculty and staff) stickers, where registered cars outnumber matching parking spaces two to one. Annual discussion of parking problems in the conclaves of student and administrative bodies ended with the annual conclusion—it costs too much to build highrise parking—and mutterings of a campus transit system reminiscent of the busline that flopped some five years ago.

Hamburgers, Malls, Apartments

Building in the town and on the campus continues—that of the town to provide students the three necessities: food, clothing, and shelter, with the first being the biggest. A new hamburger joint has opened across from the Presbyterian Church; an omelet specialty house is going up near the intersection of Glenn and College; what some 10-12 years ago was the hamburger spot, the Hungry Boy, out on the Opelika "strip" is now a Chinese restaurant; and soon the number of pizza places downtown will equal the hamburger ones.

The pride of the town developers and anathema of the downtown business community, the architecture faculty and students, and ecology-minded types, The Village Mall opened in August, bringing the modern concept in shopping

Solution to Energy Crisis is Not 'Convenience' Says Commoner -

Go Back to Cotton and Returnable Bottles

Dr. Barry Commoner debunked the common assumption that population increase is the villain in the problems of environmental pollution and energy shortages when he spoke at Auburn the same night President Nixon went on national TV to talk about the energy crisis. Noting that the energy crisis was something that a half-bright high school sophomore could have predicted three years ago—and

many ecologists did—Dr. Commoner placed the blame squarely on technological changes which result largely from quick-profit schemes. And he said that the solution to the problems will have to result from a change in atti-

tudes and a paradoxical improvement in that same technology.

At Auburn as the year's first speaker in the Kelly Mosley Environmental Lecture Series, the pioneering ecologist said that "nearly every one of our environmental problems comes about from a change in the technology of meeting our social needs."

That change happened after

World War II: "I assure you that if by a magic word we could return the present situation to a 1946 environmental situation, everybody would go home happy. There would be no environmental crisis—no laws, no agitation, nothing."

Reduce Population 86 Percent

To get to that state by reducing population, which has been offered as an alternative to the environmental problem, Dr. Commoner said "we would have to reduce the current population by 86 percent."

To reach that state—if possible—by technology would mean, "a thirty percent improvement in technology."

Discussing the changes in technology that have brought about the current situation, Dr. Commoner touched on the throwaway beer bottle, the flip-top can, and the change from soap to detergent and from other natural substances to plastics.

As an example, the infamous beer bottle problem could be eliminated, Dr. Commoner pointed out, by returning to returnable

beer bottles and improving the technology that makes them. In 1946 each beer bottle was used approximately 40 times. Today it is used once and thrown away. Engineers could make improved beer bottles that could be used some ninety times and have the same ecological situation—regardless of population increase—as in 1946.

'Switch from Cotton to Synthetics Seriously Degraded Environment'

Another of the technological displacements that's occurred is that "cotton has been displaced by synthetics," and Dr. Commoner pointed out that "the switch from cotton to synthetics has very seriously degraded the environment." To produce a fiber takes energy. The cotton fiber energy comes from the sun—"You can think of the cotton fiber as congealed solar energy. . . . You know now everybody is saying that the way we have to solve the energy crisis is to use solar

DR. BARRY COMMONER chats with Auburn students

(Continued on page 2)

PHARMACY COUNCIL—Meeting on campus recently to discuss the future of Auburn pharmacy was the Pharmacy Advisory Council. From left to right are, seated: G. F. Tom Grimaldi of Union, N.J.; W. W. Walker of Birmingham; Auburn President Philpott, and Pharmacy Dean Ben F. Cooper. Standing, W. C. Sugg '31 of Auburn; E. W. Griffith of Atlanta; J. Miles Thomas '55 of Opelika; S. Blake Yates '32,

School of Pharmacy and secretary of the council; M. W. Cotton '50 of Mobile; Harold Sharpe, Jr., '41 of East Gadsden and John P. Beasley '55 of Columbia. Members of the Council not shown include: Robert E. Scarborough of Eufaula; Lester Thagard '39 of Birmingham; Mahlon Turner '56 of Huntsville; and Betty Walker Sanfilippo of Birmingham. The group heard reports on pharmacy construction.

Go Back to Cotton and Returnables

(Continued from page 1)

energy which is going to take years of research—it's a very difficult thing to trap solar energy—a very difficult thing. And the cotton plant is sitting there quietly doing it all the time. And it's not just trapping solar energy, it is producing a social good which cannot be made without the use of energy."

Then, says Dr. Commoner, "along comes synthetics. Now how do you make a synthetic fiber? In the first place the raw materials for cotton are carbon dioxide and water which are in the air, free of charge. The raw materials for synthetics are petroleum, crude oil and gas." To get synthetic fiber ("there's no nylon in gasoline, no polyethylene films in gasoline") you take the crude oil and fractionate it, and burn it and distill it and change it and "the end result is that you have used petroleum and burned a lot of it in order to make this stuff."

"So what a synthetic fiber represents is something which makes use of a non-renewable resource, something which is not recycled. Whereas the cotton plant is using a renewable resource, the sun. The sun after all comes up every day—recycling, you know. Instead of using this renewable source we turn around to the non-renewable."

'No Fuss, No Bother'

"The energy is transformed from the sun to the cotton quietly, with no fuss, no fumes, no smoke, no pollution. Whereas the chemical fiber involves burning, various toxiant effluents come out of the plant, and it's obviously more difficult on the environment."

"So the end result is that we have substituted for an ecologically sound social good, the cotton fiber, the synthetic fiber which is much worse in social value."

Dr. Commoner gave an interesting array of figures from the governmental statistical abstracts comparing the petro-chemical industry (largely plastics and other synthetics) with the average of

other manufactures in the U.S. To really consider the real worth of any product, he maintains you have to consider the social good versus the social bad.

For instance, the value added to something in the process of manufacturing would be a social good, but the fuel used in manufacturing would be considered a social bad because it is using a non-replaceable energy source.

In comparing the chemical industry with the average industry in value added, the fuel used in the chemical industry results in slightly less than 1/3 of the value added than does the average U.S. manufacturing industry.

Dr. Commoner then pointed out that a social good would be the number of workers employed in the industry per billion BTUs of fuel, because jobs are good. The number of workers in the chemical industry is 163. "For every billion BTUs of energy burned and polluting the air you create 163 jobs; but for every billion BTUs in the average manufacturing, you create 954 jobs."

A third factor to consider, Dr. Commoner said, is the amount of water pollution caused: "For a given amount of economic return, the chemical industry pollutes the water five times that of the average industry."

As a result "in substituting synthetics for cotton we have very much increased the environmental cost of producing a given social good."

Worsen Environment 5-fold for No-iron Shirt

For a no-iron shirt, "You are worsening the environmental impact of obtaining a shirt five-fold per shirt. Is that what you want?"

Profit making and convenience are the causes of exorbitant uses of nonreplaceable energy. For instance to move freight a ton-mile is much less costly in fuel use by train than by truck, but more profitable to the owner by the latter: "It takes six times more fuel to move a ton-mile by

truck than train; but the rate of return per dollar is more by truck."

Throwaway Bottle— 40 Times Energy

For the sake of convenience we have a no-iron shirt which increases energy use five-fold per shirt, the flip-top can "raises the energy cost of the container five-fold," the throwaway bottle, one of the worse villains, raises "the environmental cost 40-fold."

Dr. Commoner pointed out that the consumer didn't instigate the convenience items that require so much extra energy to supply the same social good, i.e., the no-iron shirt, a throw away beer or Coke bottle, but rather the businesses seeking more money for their invested dollar.

Villain: Short- Term Profit

These new technologies have been "introduced by economic criteria—i.e., the short-term profit. The cost—the pollution of the air, the running out of fuel—for this enhancing of the private return, we are all made to bear in terms of a bigger social cost."

'Social Question About Productive Decisions'

Dr. Commoner is optimistic about the future because he believes that decisions for using resources will be made for the common good. "The only way to rationally use our resources—we now know we have to be rational—it used to be that we thought there was all the oil in the world, all the gas—now we have to worry—have to be thrifty. The decisions on how you produce goods will have to be made on an environmentally sound basis—that's not the way we make the decisions today. The decisions are made on an economic basis."

"From now on we are going to have to ask social questions about productive decisions."

Honoring W. V. Parker—

Parker Hall Dedicated

The wing of the Commons Building housing Auburn's Department of Mathematics is now named William Vann Parker Hall in honor of the retired graduate dean and former mathematics head. At a convocation on Nov. 9 honoring Dean Parker, University officials spoke of the man and his accomplishments and former students gathered to pay tribute to him.

Dr. Robert Butz, professor of mathematics and former student of Dean Parker, called him a natural teacher "with a truly great mind, particularly situated for mathematical problems. Dean Parker was a scholar trying to get his students to perceive mathematics as it appeared to him."

Mrs. Rebecca Roden, Graduate School registrar and assistant to the dean, spoke of her 16-year association with Dean Parker and the growth of the graduate program under him. She pointed out that enrollment in the graduate programs had almost tripled under Dean Parker.

"It is not difficult," she commented, "to run up impressive figures at the price of mediocrity. That price Dean Parker was never willing to pay."

"In routine technical matters he could compromise and make allowances for human problems," Mrs. Roden continued, "but never upon the matter of standards. He was willing to listen to anyone . . . to help solve almost any problem, if he could do so without violating academic principle."

Dr. Parker had spent almost 50 years in education when he re-

tired on July 1, 1972. He had been at Auburn over 22 years, serving a joint appointment as dean of the Graduate School and head of the Department of Mathematics for 12 years.

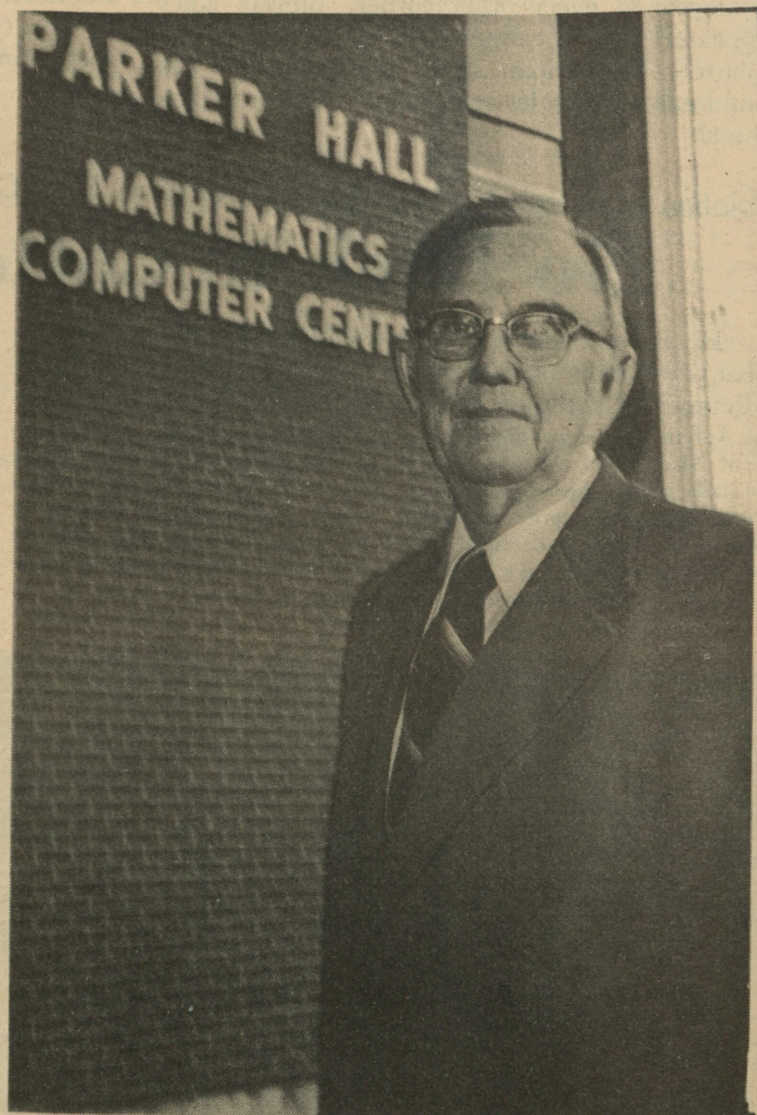

The two other wings of Commons also honor former Auburn deans, Dr. Fred Allison, Auburn's first Graduate Dean and head of the Physics Department; and Dr. Charles Saunders, former Dean of the School of Chemistry.

Dr. Drake Seeks AU Radio History

Dr. H. L. Drake, professor of broadcasting in the Speech Department and advisor to the campus radio station WEGL, is seeking information relative to old broadcasting stations at Auburn. He says such information could be documents, recordings, etc.

Dr. Drake's long-term plans are to compile as much data about Auburn's broadcasting history as possible for the use of present and future students. He sees such data as eventually becoming part of the University archives.

Anyone with information which might be helpful can reach Dr. Drake at the Speech Department, Haley Center, Auburn University, Auburn 36830.

HONORING DEAN PARKER—William Vann Parker, retired dean of Auburn University's graduate school and former mathematics head, was honored Nov. 9 at a convocation officially naming the mathematics building the William Vann Parker Hall.

Grant Aids New Teachers

A teacher's first year on the job often proves to be a losing experience—for his or her students and for the young teacher who often "drops out" after that first year and changes careers. Now Auburn's School of Education, through a \$240,000 grant from the State Department of Education is setting out to change that situation. First year teachers will find experienced help available to them from Auburn and the State staff, and so will the pilot school districts involved in the project. Dr. Ray C. Phillips, project director, sees the program as "primarily improving teacher competence and confidence, thereby improving the quality and kind of learning opportunities afforded the elementary and secondary students of Alabama." The ten school systems in the pilot program include Lanett, Lee County, Opelika, Phenix City, Auburn, Macon County, Alexander City, Russell County, Chambers County, and Tallapoosa County.

Frats Grow—Auburn's Advisor to Fraternities Garth Jenkins believes the national rise in fraternity membership—including Auburn's—indicates a general change of mood of students back to the traditions, social customs, and institutions of the past. Auburn fraternity pledges increased 15 percent this fall, and five percent in 1972. Mr. Jenkins says Auburn's increase is in line with the national trend. Auburn currently has 26 fraternities which pledged 571 members this fall.

Vet Assistant Dean—Dr. H. C. Morgan, Jr., became assistant dean of the School of Veterinary Medicine on Sept. 1. He will continue as professor of pathology and parasitology and as director of continuing education and learning resources, the positions he has held at Auburn since 1970 when he returned to the Auburn faculty from the University of Georgia. In 1965 he received the Norden Award for distinguished teaching in veterinary medicine

(Continued on page 14)

AU Gets Estate Money

Auburn has received its first money from the Eleanor E. Ritchey estate following five years of litigation which ended recently in the Florida courts. The \$383,884 payment is from accumulated earnings from Auburn's share of the Ritchey estate, currently valued at approximately \$9.5 million. Future payments will be made from the earnings on a monthly basis, according to Auburn President Harry M. Philpott.

"In accordance with the terms of Miss Ritchey's will, continuing

care is being provided for the dogs she owned at her death and the balance will support research in diseases of small animals as she further directed in the will," Dr. Philpott said.

"The generosity of Miss Ritchey enables us to expand on the

HUMANITIES ADVISORY COUNCIL NAMED—Faculty of the School of Arts and Sciences met for the first time October 10 with members of the newly-appointed Humanities Advisory Council who will assist in future planning for the areas of English, foreign languages, history, philosophy, religion, and sociology. Members are, seated from left: Rucker Agee of Sterne, Agee and Leach in Birmingham; R. J. Stockham, president of Stockham Valves and Fittings in Birmingham; Florence Hargis, patroness of the humanities, Birmingham; Caroline Draughon, former first lady of Auburn University; and James F. Sulzby, author and realtor, from Birmingham. Standing from left: D. H. Morris,

III, '34, president of Fabrics-America Corp. in Geneva; C. C. Torbert '51, attorney, Opelika; Alexander Nunn '24, historian and retired editor and executive vice president of The Progressive Farmer; James F. Vickrey, Jr., '64, director of university relations and assistant to the president of the University of South Florida; Dr. David H. Middleton '55, instructor and clinical associate at the University of Michigan Medical School; Ralston H. Robertson '42, manager of Medusa Leasing Corp. in Bayou La Batre; Milo B. Howard, Jr., '55, director of the Alabama Department of Archives and History in Montgomery; and Neil O. Davis '35, editor and publisher of The Auburn Bulletin.

VFW Dedicates AU Collection

Representatives of Alabama Veterans of Foreign Wars joined with Auburn officials Sept. 22 to dedicate a memorial plaque and a collection of books provided by the VFW, which raised more than \$30,000 for the project.

Dean Edward H. Hobbs, School of Arts and Sciences, addressed the group at the brief ceremony held in the Ralph Brown Draughon Library where the 14,000 volume collection on history of Eastern Europe, Asia, and international communism is deposited in the Social Sciences Division.

"Scholars competent in these areas inform me that this collection is one of the finest of its kind in the Southeastern United States," Dr. Hobbs said. He noted that the collection is particularly strong on the history of the era of the Russian Revolution: "So strong in fact, that Auburn may reasonably claim to have the most complete and systematic research collection in the South on the period of the Revolution and one of the most important collections on the subject in North America."

Dean Hobbs termed the collection invaluable for undergraduate and graduate studies in Auburn's School of Arts and Sciences, especially in such areas as history, political science, economics, foreign languages, and philosophy.

At the time the collection was begun in the early 1960's, Auburn offered only a limited number of courses in the areas which are covered by the collection, most of them general surveys. There are now a variety of specialized courses at both the graduate and undergraduate levels, and an active interdepartmental Committee on East Eu-

ropean and Russian Studies. Dr. Jacob Walkin, chairman of that committee, presided at the dedication ceremony.

As indicated by the wording on the plaque, the collection was established "with the conviction that wisdom born of understanding and produced by comprehensive study offers America the best hope of perpetuating democracy and combatting totalitarianism."

Project Begun in 1960

The VFW leaders conceived of the project in 1960 and it was begun under former Post Commander Leon Gray of Auburn as a local effort of the E.W. Allgood Memorial Post. Past Department Commander James Allgood and others secured the adoption of the project. Working closely with these was Jerry Roden, Jr., '46, then editor of the Auburn *Alumnus* and now a member of the English faculty at Auburn, and Joseph B. Sarver, Jr., '37 secretary of the Auburn Alumni Association.

Past Department Commander Thomas B. Dean of Gadsden and E. L. Darden, then of Gadsden and now of Auburn, alternated as chairman of the Alabama VFW Library Committee. With these, a host of VFW leaders and members of the auxiliary throughout Alabama were instrumental in raising the funds.

The collection was built carefully by a VFW Book Selection Committee composed of Dr. Carl Benson, chairman; Prof. O. T. Ivey and Dr. Ray Ritland, with other faculty members assisting.

VFW COLLECTION DEDICATED—A collection of 14,000 books on the history of Eastern Europe, Asia, and international communism to "perpetuate democracy and combat totalitarianism through wisdom born of understanding" was dedicated at Auburn Sept. 22. Participating in the ceremony were, from left: VFW

State Commander John T. Golden of Birmingham, State Adj. Gen. James L. Allgood of Auburn, Auburn Arts and Sciences Dean Edward H. Hobbs, former Library Director Clyde H. Cantrell, and Jerry Roden, Jr., '46, a member of the E. W. Allgood Post at Auburn which initiated the program.

Here and There—

Something Afoot in Montgomery

By Jerry Roden, Jr., '46

After expending so much space here lamenting the shortcomings of public education, I am pleased to make a positive report: The public schools of Montgomery are in the midst of an exciting pilot program that may reverse the deplorable record of public schools in teaching history.

Most of you, I am sure, have noted the same things that I have about history in public schools. Administrators have seemed to share Henry Ford's assessment of history as "bunk." They offered it because they had to and assigned teachers with little regard to proficiency or enthusiasm. As a result most students have grown up considering history an unconscionable bore—an assortment of dreary dates, musty facts, and dry bones of an incomprehensible past.

In contrast to this normal situation, Montgomery junior high students, their teachers, and even their administrators are enthusiastic about a teaching approach that has brought history to life in their classrooms. There the records of the past have not only become interesting but have also assumed relevance for their daily lives.

The project which has brought about this promising revolution is the brain child of Professor O. T. Ivey, who developed a special cultural approach to teaching during his long tenure with the Auburn University History Department. Now with the assistance of Dr. Andrew M. Weaver of the Auburn School of Education, Professor Ivey is transmitting his teaching principles, tremendous knowledge, and unbounded enthusiasm to teachers and through them to students in Montgomery.

It is not my intent here to explain Professor Ivey's method in detail. (Miss Lovvorn plans a special feature for that purpose in the near future.) I only wish to alert those interested in real education that something significant is afoot in the Montgomery schools where some seventh graders can put to shame many of us adults who assume to know something about history.

Lest my own excitement appear to exceed reasonable bounds, I should note that I am not certain about whether the results that I had the privilege of witnessing on a recent visit are primarily the product of the method or of the man who discovered it—or, as he would maintain, *re-discovered* it.

The possibility that the man, the great teacher, is the primary source of inspiration and learning caused me to pause before voicing this unaccustomed positive note. But after interviewing some of those Montgomery teachers individually, I realized that distinctions about man, matter, and method may not be so important in this case. For the man and his method have created disciples with an evangelical fervor so that there is hope that the revolution will spread outward and on outward from Montgomery.

Sarver, Jr., '37; Associate Secretary, George (Buck) Bradberry; Executive Committee, Tom Ollinger '49, Sam Renfroe, Jr., '49, Carl Happer '40, Mary George Lamar '33, Curtis Modling '47, William F. Joseph, Jr., '52, and Morris Savage '58, ex-officio. Second class postage paid at Auburn, Alabama 36830.

Esoterica for Everyone—

Taking 'College' on the Plains

By Bob Sanders '52

(Reprinted from The Auburn Bulletin)

Looking back on it, I'm still not sure how I ever got enrolled at East Alabama Male College.

Young high school graduates these days seem, somehow, far more worldly and self-assured than we were back then.

Now, the typical student comes into town in his expensive sport car with Mom and Dad driving his other car—after all, he can only drive one of his cars at a time—and somebody else driving the moving van with all his dozens of trunks and suitcases and such.

I remember fairly well, although the picture is getting a little hazy around the edges, the first time I ever laid eyes on "The Loveliest Village." About a month before we graduated from high school, Joe Brock and I, having vaguely heard about something called college, took us a little bus trip that carried us to a couple or three higher learning campuses.

One, over on the western side of the state, somehow turned us off. It just didn't seem comfortable; we knew, individually and collectively, that we wouldn't feel at home there.

At another, smaller, school we chanced to arrive at a particularly rainy, gloomy time. And, even though we happened to run into a fellow from our hometown there, the setting didn't seem conducive to a pursuit of superior knowledge. We rode on.

At last, we came to Auburn. The sun was shining (a condition we decided only a few months later was a rare one), the birds were singing, the campus around old Samford looked and felt like a college campus was supposed to look and feel.

And, while we were not used to such immense throngs of people—gad! we must have had three or four thousand students then—there was an air of friendliness that made us feel right at home. We decided this was the place.

Of course, I was counting on Joe to be with me, at least in the getting-in stage; he always did have a knack for detailed things. He could even get model airplanes put together.

And then that sonofagun did a foul thing. He decided to wait till the fall quarter to start, which meant I had to face this whole thing of metropolitan living all by myself.

Well, ready or not, here I came.

When the summer quarter started, I unhitched old Hat from the plow over in that field on the old Chandler place, you know the one, there where Daddy has hay now, got my little traveling bag all packed, and headed down this way.

Of course, then, as now, as Daddy has reminded me many times, you can't get from my hometown to here. You have to go somewhere else and start.

But I eventually arrived at the incredibly bustling Opelika bus station, where I had to change to another bus to get to Auburn. I managed the transfer fairly easily, this being the second time through there.

In between gawking at the tall buildings and the colorful night spots along the route, places like the Midway Tavern, The Wind Mill and The Wagon Wheel, I negotiated the trip and ultimately wound up in what was to be my home.

"I'd like to join up," I told somebody over at the registrar's office, I suppose it was, after I had been guided to it by helpful citizens and students.

"Do you have a place to stay?" they asked, getting to first things first.

"No," I said, "I thought you took care of all that."

"Well," they said, "let's put you over in Mag-

nolia Hall." That was OK with me, although the plumbing did take some getting used to.

Then, there followed the most confusing few days of question-asking, form-filling out, and line-standing I had ever in my short innocent life been subjected to.

They even asked silly questions like, "What do you want to take?"

"Whaddayah mean, 'take?' I just want to go to college. I'm here, ready to start. I want to take College." I was a little disappointed in these people who were supposed to be pretty smart. "Take," indeed.

We finally arrived at an agreement and I got my dues and room and board and laundry fees all paid, and before you knew it, I was drilling in ROTC and taking basic PE and listening in

(Continued on page 5)

Autumn in Auburn

(Continued from page 1)

to Auburn: 10 acres of concrete and asphalt and 14 new places for students to buy namebrand jeans and clogs.

As for shelter—an apartment complex seems to have sprung up at the north end of every street west of College, some bragging of tennis courts, club houses, and townhouse design. Even condominiums have come to town and the first such is being squeezed tightly onto the northwest corner of S. Ross and Thach. Of course housing developments stretch Auburn suburbia in every direction as do the trailer parks.

On campus the remodeling of some part of Samford Hall which has gone on for the past eight years may be in its last stages; the Union addition, scheduled to be ready in September, promises to open its doors the first of the year; and the pouring of foundations for the new music building is underway on Samford Ave.

Bids for the long-awaited \$4½ million pharmacy building were let in late October and completion is scheduled for fall, 1975.

An amazing support of higher education by the recent Legislature has meant salary increases for Auburn faculty, making them more nearly par, and will eventually mean a new home for the over over-crowded Architecture Department, and that the School of Agriculture can shift its labs, fields, chicken coops, and pig pens in the coming years.

Activism is a thing of the past except for the Action Ecology group's persistence in collecting newspapers and bottles for recycling, and Student Government Association's recent idea to do away with Associated Women Students (AWS).

AWS, the SGA maintains, currently does nothing but enforce discriminatory women's rules. Old-timers say that, except for changing its name (from Women's Student Government Association) and for a brief time in the early '70s when a couple of liberated types were AWS president, that's all AWS has ever done.

Inside academia a couple of new deans are getting programs underway; new heads grace several departments and architecture is seeking one; and the Department of Religion is offering its first courses.

Gorgeous fall weather has meant that students have had to exercise stronger-than-usual will power to get themselves to class in these days of non-compulsory class attendance.

And despite an extremely frustrating 6-4 football season presently, Auburn will conclude the Christmas holidays with a trip to the Sun Bowl.

THE AUBURN ALUMNEWS

Spare The Rod

Heleni Pedersoli '73

My friend was eloquently explaining to me why she wouldn't allow a television set in her house:

"All that violence, profanity, gore, and sex will certainly turn my children into perverts, or murderers."

Then she turned to one of her vivacious boys who was having it out with his brother about whose turn it was to throw the ball:

"If you don't stop hitting your brother, I'm gonna beat you up, boy!"

I had probably repeated this same phrase many times myself, but only then did I realize the absurdity of the remark. Saint Hilaire once said: "You use constraint when all you need is reason; force when all you need is light." And constraint and force have been the means we have used to impose on our children rules and regulations which they can't understand, and which we hardly ever take the trouble to explain. Since they remain mere words, all the more tyrannical because they have no meaning, all we have accomplished is to breed rebellion and resistance to such laws.

That in our society, which we call enlightened, teachers and school administrators have the legal power to actually beat our children into docility and conformity, appalls me. I had to come to grips with the problem recently, not as a teacher—which I am supposedly qualified to be—but as a parent. I learned that students in one of our schools had their choice of three kinds of punishment for misbehavior (such as forgetting to turn in a book): paddling, a method I find not only archaic, but degrading; "detention hall"—ineffective and humiliating; or copying over a certain number of times a single-spaced, typewritten page of meaningless rules and regu-

lations. In other words, a waste of the student's time (shall we call this demeaning?). When I complained in a note to the teacher about the idiocy of the latter, I was summoned to a conference about the importance of discipline.

Now, I know of the need for discipline. Four years of education courses have taught me that the goal of discipline is to help children grow into mentally healthy, responsible, concerned people, capable of self-control, aware of the rights of others, as well as of their own rights. But I question the validity of the means we are using to enforce such discipline. I have seen an angry principal hurl a small child several feet across a school hall. I have heard of severe paddlings, of taped mouths, of tongue-lashings. And I am revolted, I am concerned. I question the efficiency, and even the humanity of such methods, for I doubt that a student who, resentfully and automatically, copies a page of rules a couple of times will gain insight into the social reality. Rather, where they are meant to create respect for authority, methods such as these are bound to breed rebellion against authoritarianism. The punishment sheet had a brilliant ending: "Hopefully," it stated, "the student will be sorry for disobeying his teacher as any of the above punishments is a waste of the student's valuable time, when compared with what he might have learned during the time it took to complete his punishment assignment." Yet, discipline should be designed to facilitate instruction, not to punish by denying an opportunity to learn. Are our schools teaching students to "be sorry for disobeying the teacher," or is the purpose of discipline to teach a child to live harmoniously in the human society?

Two centuries ago, Jean-Jacques Rousseau pleaded with educators "to spare the rod," and treat children with the respect due to human beings. More recently, Dr. Chaim Ginott, an educator himself, and a great child psychologist, condemned the acts of violence we commit in the name of discipline. "Children are guests in our homes and schools for only a few years in which we can really make an impact on their personality, on their character, and on their

Esoterica For Everyone

(Continued from page 4)

amazement to this fellow Benson telling, in his fashion (Mrs. Redus was never like that), how you were supposed to write something called themes.

I found out a long time later that they had things like Freshman Orientation and some kind of President's Tea, or something, that were supposed to ease the way for getting into school. After the shock had worn off, I looked with mild contempt on my fellow students (not a single one of whom I had known before) who had taken that easy way.

Anybody could have gotten in that way. I wore my registration battle scars proudly. I felt that anybody who could just get through such a mess was already pretty educated. After all, a lot of folks didn't make it that far.

Take Cousin John, for example. About the time I got to be a real College Joe senior, he came down to enroll. But after some three days of being shunted from one line to another he said that, hell, he'd had enough college already to last him a lifetime; that he was going back home, and that he never wanted to get out of sight of Mt. Pisgah church again as long as he lived.

values," he says. Who ever paddles a guest for forgetting to return a book? If we would treat our children with respect, we might find that this respect will be returned.

We have not yet found the magic formula to eliminate misbehavior in the classroom, or crime in the streets. Actually, as it is, we are far from achieving success. Meanwhile, we should not be so much concerned with the sin of breaking rules as with the sin of breaking people's minds. Children should be guided to see the real issues behind the many laws and regulations, the real people they will have to live with, in harmony and peace, not forced into a sterile conformity, or a precarious docility. For how can we expect love, when we teach hatred? How can we reap a peaceful generation when we sow seeds of violence?

-History Professor Profile Series-

Rea Keeps Standards High

By Thom Botsford '73

Knowledgeable people on campus generally exhaust their store of superlatives when speaking of eighteenth-century historian Dr. Robert R. Rea. "He's one of Auburn's chief academic glories," a professor tells his students regularly. Another describes him as "a scholar determined to uphold standards at anyone's risk." A third, one of his history colleagues, calls him "a brilliant thinker, a forcible and candid speaker, perhaps the supreme authority on the colonial history of the old Southeastern territory."

"toughest prof. . . ."
-Jere Beasley

Undergraduates, however, are prone to regard him with awe. In class, he squeezes a seeming eternity of facts into an hour's space, seldom falls into redundancy, and expects his students—so they claim—to remember every last word. "Yes, he gives us plenty of brilliance," one complains, "but he expects us to return that brilliance on exams—and that's virtually impossible."

When Lt.-Gov. Jere Beasley visited the campus recently, he ran into Dr. Rea and told him, frankly, "You were the toughest professor I had at Auburn." That seems to be the consensus opin-

ion among more than a few who have studied under Rea. His "History of Medieval England" course is probably the source of his "hard taskmaster" reputation among undergraduates. Required for all pre-law students, it covers a period beginning with Caesar's invasion of Britain in the first century B.C. and ending with the restoration of the Stuarts after the Puritan Revolution in the seventeenth century (A.D.). Since most undergraduates are ignorant of the origins of their own culture, including the development of its common law, the course requires that they familiarize themselves with fundamentals before they relate facts and isolate significant trends and movements for discussion—a task many have not had to struggle with in American history courses, which cover more familiar and less extensive ground. All in all, it absorbs more of their time than many care to devote.

But to Dr. Rea, who thinks time is not for wasting, the majority of students spend too many precious hours in front of tele-

vision sets or engaged in relatively trivial activities, in effect spurning the satisfaction that can grow out of study given proper cultivation. Such an observation coming from an anti-social, scholarly recluse might easily be dismissed; but Dr. Rea, in his spare time, manages to keep the Auburn fencing club active ("I'm the permanent fixture"), play the viola in the university orchestra, and work on research projects. He refers to his lifestyle as "very relaxing."

Undergraduates and their problems aside, Dr. Rea's primary concern is with the graduate history program of which he is chairman. "We have a department which will compare favorably to any in the region, barring such old establishments as North Carolina, Vanderbilt, and Duke. We offer a demanding, professional course of study," he says. Perhaps this emphasis on quality has something to do with the department's remarkable success in assisting graduates to find jobs on the flooded history market. Dr. Rea, however, attributes it to luck. "Proportionally, we've been lucky—all but one of our

Harrison Deserts Jefferson's Papers for Classroom

DR. JOSEPH H. HARRISON, JR., Jeffersonian scholar, is noted for his witty, "quality talk" infused into American history lectures.

By Thom Botsford '73

Despite his modest objections to the contrary, American history professor Joseph H. Harrison, Jr., speaks with a tongue of sterling silver, often turning lectures into dramatic monologues and droll conversations into lively debates. "He sparkles," one student commented after completing Dr. Harrison's Jeffersonian history course, "and is a maestro of the subtle punchline: he tells a joke and, then, a couple of minutes later, you discover the humor at the expense of your classroom notes."

Dr. Harrison's talent for talk-quality talk-might have wasted away if he had remained at Princeton University, assisting Dr. Julian P. Boyd edit Thomas Jefferson's papers. For a year, spanning 1957 and 1958, he collated manuscripts, deciphered eighteenth century script, and literally strained his eyes so badly he could not read after a full day's worth of meticulous research.

No contraceptive mind

"Although I liked the project at Princeton, I knew-after a year of it-that editorial work was clearly not the kind of thing I did well. The clerical duties involved are best suited for a contraceptive mind, one historian told me, and I agree that much of it is drudgery. That's the price you generally have to pay for absolute precision."

So he returned to teaching, spending nearly seven years at George Mason College in Fairfax, Virginia, before coming to Auburn in 1966. The switch required little adjustment since he had taught here in the fifties, working after hours on his doctoral dissertation-a study of the construction of roads, canals, and other internal improvements in the early years of the republic. In 1954, he received his Ph.D., the last of three degrees earned at the University of Virginia. Presently he is expanding his dissertation for future publication.

Although his flair for spicing lectures with entertaining anecdotes, wit, and choice talk make his classes "fun," his demand for critical evaluation of materials and precision in scholarship insures that his students truly work for superior grades.

"Historians pay more attention to details than ever before so it is becoming harder and harder to be a competent generalist," he warns, justifying his demands on history students. Those who plan to teach broad-based survey courses-one quarter or semester United States history courses, for example-must know how to cope with the massive amount of detailed information available, know where to go for dependable advice on new and revised materials, and, finally, know what to condense and present in the classroom. It becomes a matter of "keeping up" in the midst of an information explosion, he explains.

Ironically, when competent history teachers are needed more than ever before, many qualified history graduates on the master's level cannot find teaching jobs, Dr. Harrison points out. He thinks the current job crisis

might be best exploited by the secondary schools if only they would hire history M.A.'s without requiring them to complete curricula in schools of education.

"When I think about the mediocre history instruction some of our children receive in school and then talk to many bright, young jobless history graduates without teaching certificates, I get angry. It's a great shame we are not able to place history M.A.'s and A.B.D.'s in the secondary schools without them having to spend time and money on so many education courses, many of which appear to be redundant."

Dr. Harrison devotes most of his teaching time to undergraduate and graduate courses on the American revolutionary confederation period and the subsequent Jeffersonian and Jacksonian eras. All candidates for the history Ph.D. take his historiography course, a study and criticism of the sources and development of history as a branch of knowledge. ("We start with the Bible and the Greeks and go from there.") Occasionally he teaches a sophomore level survey course, generally covering U.S. history to the beginning of Reconstruction. Here, he usually encounters some misconceptions left over from defective instruction in the high schools.

"Some students believe anything in print. They point to the text and say 'it has to be right, it's in the book.' They don't understand that many historians disagree with one another or that an author is human and sometimes subject to bad judgment. More specifically, I find that many students think the British, prior to the Revolutionary War, were completely tyrannical despite much evidence to the contrary. This idea appears on exams after considerable discussion and clarification in class. Sometimes you can explain and explain and you will not succeed in removing that misconception."

Throughout the year, he handles information and applications for various scholarships and fellowships, among them the Fulbright, Rhodes, and Danforth. "When I was in Paris doing research in 1969, the dean's office contacted me and asked me to take the job. Since I was studying, in part, on an Auburn grant, how could I refuse?" he chuckles, speaking of a task he obviously enjoys.

Speaking Out

In his spare time, Dr. Harrison relishes "speaking out" on current issues or "letting the sparks fly," a habit his father encouraged at the dinner table during the golden days of radio. "My father, a Virginia businessman, would have us listen to any and every old windbag politician on the air. During elections he always wanted to know how we felt-it was important to make a choice. Of course, this is not so unusual. That's why I was surprised when I encountered the drop-out mentality among some

of my fellow soldiers in the army. They would simply leave everything up to "them" in Washington. They didn't have an opinion; they didn't think it mattered. I find that attitude unfortunate-and potentially dangerous."

So Dr. Harrison speaks out. Last spring, for example, he accepted an invitation from campus radio station WEGL to debate political science professor Donald Hayhurst on the current policies of the Nixon administration. Much to the surprise of the student moderator-who was expecting a dull academic affair-Dr. Harrison and his opponent "started a few arguments as soon as they sat down in front of the microphones and had to be interrupted when the show came on the air so that listeners could get in on the disputes at the start." For three quarters of an hour, the sparks flew, prompting *Plainsman* columnist Bill Wood to write: "If political parties can stimulate similar discussions and mutual constructive criticism, they will have performed a function that alone is enough to justify their existence."

'Slugging a Sponge'

Dr. Harrison's talent as a sloganeer surfaced two summers ago at a town gripe session staged to protest the firing of a popular police detective who had not been confronted with the reasons for his dismissal. Amidst a throng of citizens clamoring for the officer's reinstatement before a dour collection of city councilmen, Dr. Harrison rose to the occasion and compared the detective's plight to that of "slugging a sponge." How can a man defend himself if he doesn't know why he was dismissed? Dr. Harrison asked the council. The crowd roared with approval, and one newspaper annointed "slugging a sponge" as the best slogan of a week's worth of political harangues.

"No one has ever tried to shut me up although some of my colleagues feel such activity is inappropriate," he says. "They fear students will question a professor's objectivity. But a scholar, especially a historian, it seems to me, can often put matters into perspective and thereby stimulate students or the public to think issues over thoroughly whether they finally agree with him or not."

Although Dr. Harrison speaks his mind, few would challenge his impartiality. In and out of class, he welcomes all points of view pertinent to the topic at hand. As a historian he thinks "the worse thing one can do is manipulate the past to provide propaganda for the present. That's dirty pool," he quips.

"What really qualifies me for teaching is my enormous interest in history. I would rather study history than do anything else. I relive the past because I believe it pertinent to the present, which is, after all, history too." That, in short, is why Joseph Harrison didn't become a lawyer, a journalist, or a "tobacco man" in Virginia like his brother. He considered all of them, but opted for history-and for his own happiness.

Rea Keeps Standards High

recent graduate students have found jobs. When you consider that there are about twice as many history graduates as there are jobs, you know the luck cannot last." Nonetheless, most undergraduates don't think about future employment when they enroll in graduate school. "They enroll simply because they enjoy history," he says.

Unlike Auburn's, many history graduate programs are designed to produce specialists who plan to concentrate their future teaching and research on single historical periods or trends-in essence neglecting a broad, macroscopic outlook for a detailed, microscopic one. Dr. Rea, though, thinks neglect of attention on teaching a broad view can cause some initial irritation in the classroom: "I have a good friend from Yale who had no idea

classical origins is not so important as looking more closely at relatively recent times," he says.

The value of taking such a close look-or studying history in any context, for that matter-has always been questioned by those who expect an immediate "practical" end out of education. And even Dr. Rea will admit that history is hardly profitable in the narrow sense of the workaday world. "It's real value lies in its long range consideration of life," he comments. "It provides society with a perspective necessary to sanity." Unfortunately, many "practical" people are not accustomed to taking this long range view. Instead they often react to contemporary events as if humanity had never experienced crisis before.

It is that reaction, that short range view, which Dr. Rea finds

History 'provides society with a perspective necessary to sanity'

of how to teach a freshman survey course. He had to learn by experience. Here, we try to produce generalists as well as specialists for the sake of that first group of freshmen a new teacher encounters as well as the teacher himself."

The History Department, for all its merit, is small. One cannot study ancient and medieval history in any detail or find many offerings in Asian and African studies. Dr. Rea would like to expand in all of these directions, excluding the ancient. "Most who ask for ancient history are freshmen who have no idea of what an adequate study of that requires-a firm background in Greek and Latin, just for beginnings. I believe tracing our

potentially dangerous. "We need to do some pretty hard thinking about priorities, about questions of international power, about vital resources-from the long range point of view. Long ago, we should have acknowledged the shortage of fossil fuels and developed alternatives. In fact, the long range view pointed in that direction." Such prudence, however, is too often obscured by reactions to relatively insignificant problems.

"I read a book recently, for example, that explored a parallel to the hippie-love scene we got so upset about a few years ago," he says. "In the seventeenth century, a group of drop outs, it seems, decided to live by 'love'

(Continued on page 8)

Dr. Wesley P. Newton—

Coup d'états, Bananas, and Aviation

By Thom Botsford '73

During the tension-packed days of the 1962 Cuban missile crisis, Wesley P. Newton was quietly working toward a doctorate in Latin American history at the University of Alabama. To find a job upon completion of his study would require an exhaustive search, he thought at the time, as specialists in Latin American history traditionally filled only esoteric posts at progressive universities.

But suddenly, in the aftermath of Khrushchev's shuffling of missiles in the Caribbean, academic employers decided that Latin America deserved more classroom attention. Far too many students regarded the area as merely a "backyard" to the United States: a collection of relatively inconsequential countries pumping out bananas, coffee, sugar cane, rhumbas, and coup d'états for yankee consumption and entertainment. To thoroughly explain the rise of Castro and other di-

prised his new employer since few professors can resist the lure of better pay. He and his wife Merlin, who also teaches college history, simply compared the two campuses and found the Auburn atmosphere more to their liking. They knew the choice of a comfortable setting—the happiness factor—could make a crucial difference in the quality and quantity of work they would produce as historians. As a consequence of their decision, Mrs. Newton has taught here and at Huntingdon College in Montgomery, where she is presently employed, while Dr. Newton has spent a busy nine years in his dual role as teacher and research specialist.

Besides teaching a normal load

**'The average student needs history . . .
It helps him see beyond the 50 yard
circle around his own nose.'**

lemmas south of the border, university history departments needed Latin American historians.

So Dr. Newton had no problem finding employment in 1964 when he completed his doctoral dissertation. While teaching at Alabama College in Montevallo, he was offered positions at Auburn and Texas A&M, the latter promising more pay.

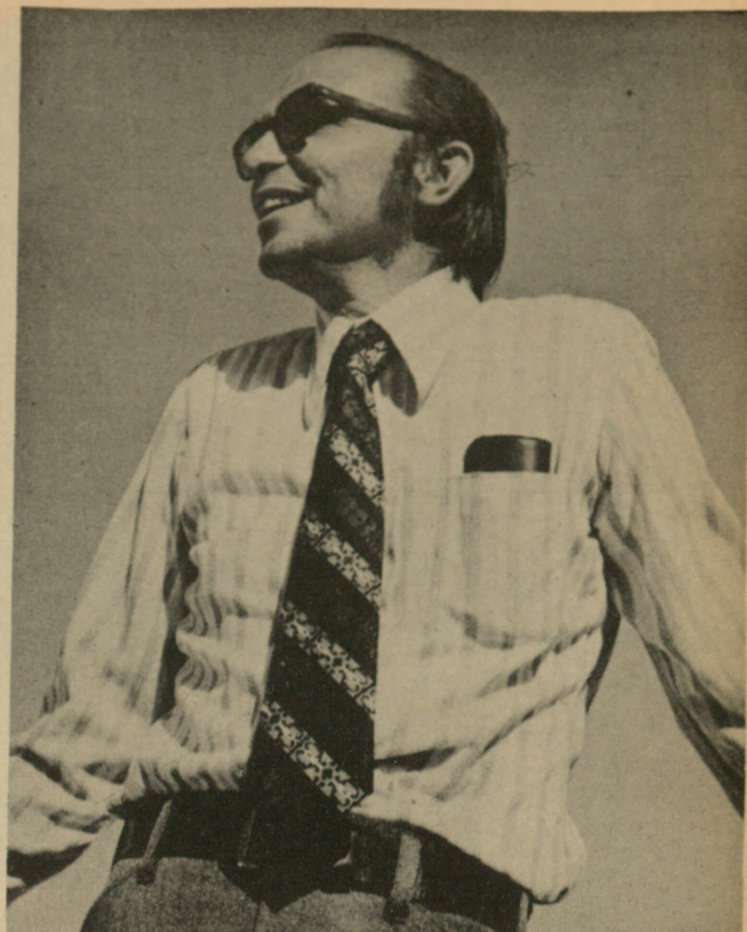

"I was astounded at the Texas A&M salary," he said, "and didn't know quite what to do since I much preferred Auburn as a place to live and teach." Dr. Newton's final decision to come here sur-

veyed undergraduate and graduate courses, he has rewritten his doctoral dissertation—a study of the origins of Latin American aviation—for a book which is scheduled to roll off the University of Miami Press a year from now. "It has two titles: *The Perilous Sky and U.S. Aviation Diplomacy and Latin America, 1919-1931*. The first one is designed to interest students and the subtitle to satisfy scholars," he laughs.

While studying at the University of Alabama, Dr. Newton discovered that no one had ever done a comprehensive study of

the circumstances establishing Pan-Am as the first truly international airline. In *The Perilous Sky*, he discusses how the U.S. government, fearing foreign air threats to the Panama Canal, subsidized Pan-Am essentially through air mail contracts in the late 20's and early 30's. His explanation of the resulting rivalries between favored Pan-Am and other airlines, both American and European, illustrates how aviation diplomacy worked in the pioneer days of aircraft, especially in the Latin American context.

But research seldom is conclusive; it usually leads to myriads of unexplored and unexplained possibilities tempting historians to spend lifetimes piecing together details in quest of new, exciting perspectives. Presently Dr. Newton faces the dilemma of deciding which research project he will complete first and worrying if he will ever find enough time to spend on the others. For example, he is reviewing a book written by former air official Ralph O'Neill, whose now-defunct airline competed with Pan-Am for government patronage. Afterwards, he would like to write O'Neill's biography. But this project would take him from his present work on Delta Airlines, a history he and Dr. David Lewis, Auburn's Hudson Professor of History and Engineering, started earlier this year. That work alone (which involves inspecting volumes of Delta records and interviewing associated personnel) could take years to complete and, the two historians discovered this summer, might delay them from writing a compre-

DR. WESLEY P. NEWTON, Latin American historian, has researched United States aviation diplomacy, especially in connection with affairs South of the Border.

hensive history of all American commercial aviation. Dr. Newton's other ambitions—a history of Mexican aviation and another on the Western Hemisphere's first enduring airline, Avianca of Colombia—make his collection of projected undertakings seem overwhelming.

The Delta project will encompass more than the chronological listing of executive decisions and activities. Drs. Newton and Lewis plan to dissect the entire social

structure of an innovative, twentieth-century business, interviewing stewardesses and maids as well as officials and pilots. Therefore, the finished product will interest social historians as well as aviation specialists.

Dr. Newton's other and more immediate responsibility is teaching, a job he does not neglect to pursue research interests. Normally, he concentrates on relatively specialized Latin American
(Continued on page 8)

Lewis, Optimist, Links History With Engineering

By Thom Botsford '73

Predictions of future shock and global disaster fail to depress Dr. W. David Lewis, Auburn University's interdisciplinary link between history and engineering. "Lately we have gotten ourselves very bogged down with doomsday literature feasting on the bomb, 1984, technology controlling man and so forth," he warns. "It's getting our morale down when we should be concentrating on constructive action, accepting our responsibility to make moral and ethical decisions, shaping the destiny of this planet in the direction of man over machine and not vice-versa. I know we are capable of it."

The Hudson professor of history and engineering calls himself a "cautious optimist," believing man a creature of free will who must share God's creative power in transforming the earth. Technology, he says, is not a diabolical force scattering the seeds of destruction throughout civilization but a potential reservoir of solutions to pressing world problems, especially those of the environment.

In a circular describing one of his technology and civilization courses, he appeals to those who will help shape technology in the future: "Engineering and pre-engineering students are encouraged to enroll in the course, which should help them understand and appreciate the devel-

history by way of social factors and forces rather than by emphasis on dates and names. A student enrolled in his series of technology and civilization courses studies world history in terms of the influence of human ideas and concerns upon technology, and vice-versa, from prehistoric times to the present. "The main goal of the entire series is to give the Auburn student the type of historical background which will help him evaluate intelligently

and constructively the many problems and issues in the contemporary world which involve technology in one way or another," he explains.

His three-quarter technology and civilization series, an alternate to the freshman level world history requirement, appeals to a wide range of students but especially to the scientifically and technologically inclined, many of whom traditionally find general history courses burdensome and sometimes (mistakenly, of course) "unrelated" to their chosen field of study. Approximately thirty-five per cent of his students, he estimates, are engineering majors. He has an office in Ramsay Hall among the engineering faculty as well as one in

**Man: "A creature of free will who
must share God's creative power . . ."**

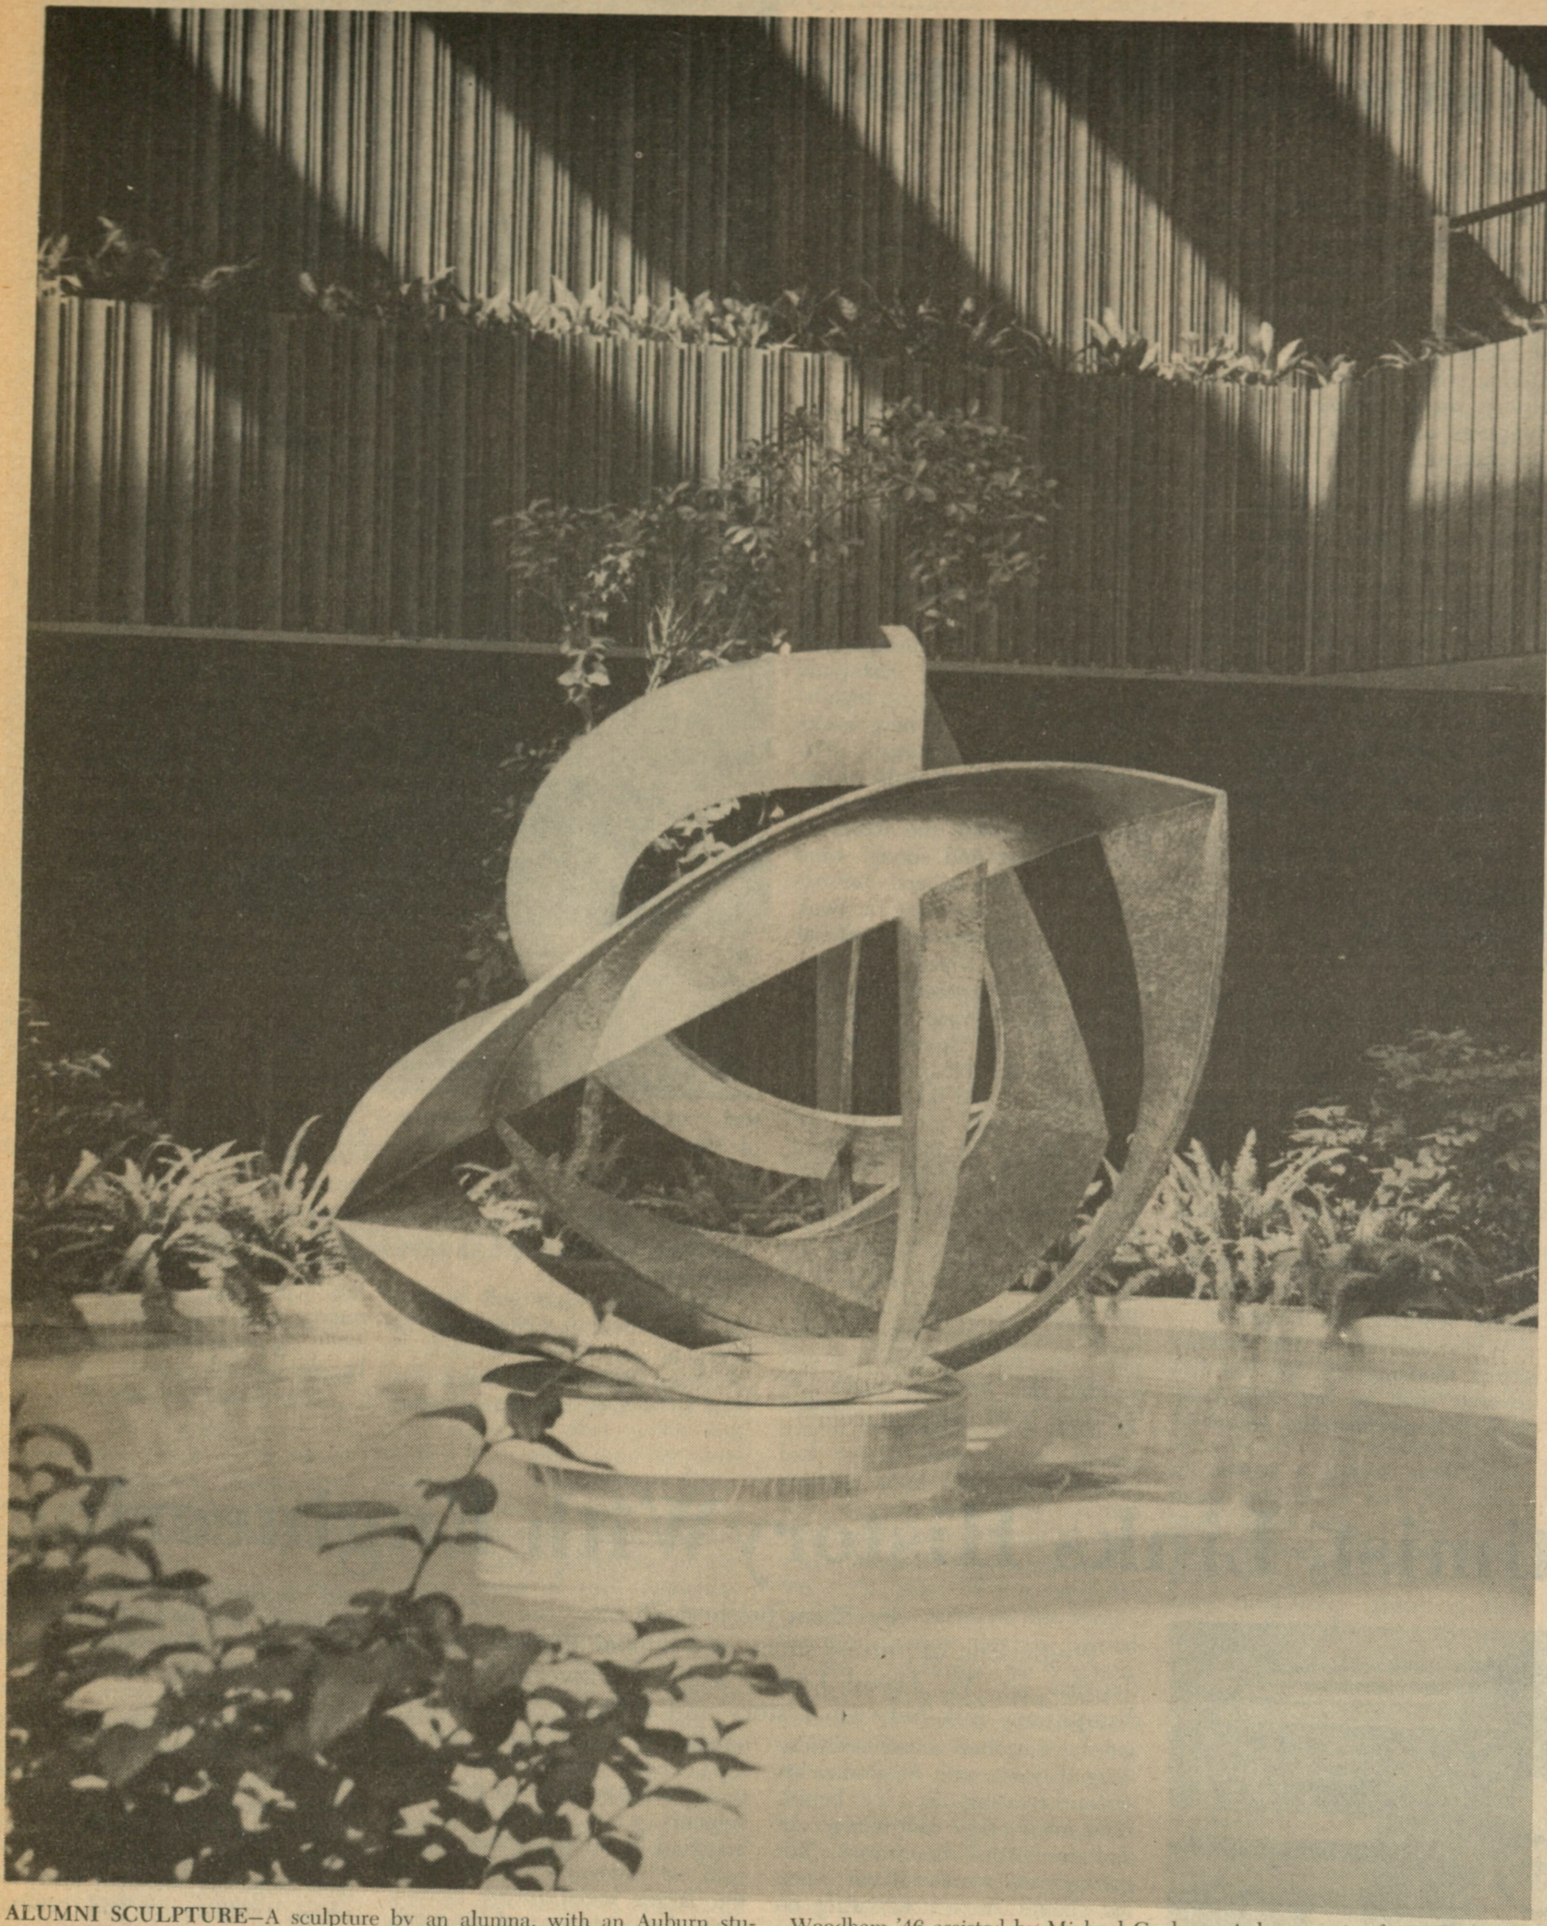

Haley Center among his history colleagues and divides his time between the two.

Even though the technology and civilization courses average about four hundred students per class, Dr. Lewis doesn't yield to the temptation to give exclusively "objective-type multiple choice" quizzes. He includes essay questions on exams, thereby giving students a chance to re-

ALUMNI SCULPTURE—A sculpture by an alumna, with an Auburn student as her assistant, is now in place at the General Telephone and Electronics corporate headquarters in Stamford, Conn. The sculpture, by Jean

Woodham '46 assisted by Michael Cook, an Auburn senior from Tuscumbia who studied under Miss Woodham when she taught here in 1971, is made of welded bronze and set in a circular pool.

Freshman History 'a real test'

(Continued from page 7)

courses, but twice a year, along with his colleagues, he assumes another responsibility: that of teaching a freshman world history class. Here he must brush up on areas of history other than his specialty and devise ways of presenting material to a large auditorium classroom full of students there by requirement, not by choice.

"It's a real test to teach about 400 students a thousand-year chunk of world history in three months. Sometimes, when I feel they are truly learning, I enjoy the experience. Occasionally, however, I look out over the lec-

tern and see boredom and hostility—some of them even go to sleep—and the experience is miserable. But we've made some improvements lately. Dr. Allen Cronenberg, head of freshman history studies, has succeeded in reducing the number of students to about 200 in most classes. So we hope the atmosphere will not be so impersonal. Still, money is

that a teacher feels like he is standing on top of Mount Olympus teaching to a multitude.

"But the average student needs world history. It helps him see beyond the fifty-yard circle around his own nose. Students need to know something about the cultures of the East, Africa, and Latin America as well as those of the United States and

'... There are so many freshmen taking world history that a teacher feels like he is standing on top of Mt. Olympus teaching to a multitude.'

scarce—and there are so many freshmen taking world history Europe. What happens today or tomorrow in Cambodia or Chile,

affecting us, can be explained in terms of the past. It can help us prepare, psychologically at least, for the future."

One might wonder where Dr. Newton finds the extra time to preside over the Auburn chapter of the American Association of University Professors or serve on the board of directors of the local American Civil Liberties Union. "I should be two people," he says, "a teacher and a research specialist, with a private life for both of them. As it is, I don't have time to go to many parties, take long vacations between quarters, or spend too much time with my family. But I try to balance everything."

Rea Keeps Standards

(Continued from page 7)

alone. They didn't attend church eight hours a day (this was a Puritanical age) and drank freely for the fun of it. When we realize that this hanky-panky is not new, we can cope with it better." Our reactions, the implication is, would then be sounder.

Dr. Rea's latest research is, in part, a study of the reaction of eighteenth century contemporaries to what is now considered an extremely important event: the American revolution. Along with a Colgate professor of German, he is translating and editing the papers of a German mercenary force, the third Waldeck regiment, stationed at Pensacola for a time during the war period. "This particular regiment had been in New York from 1776 to 1778 and left behind some brilliant descriptions. Some of the major aspects of the revolution are seen from a perspective of high intellect and curiosity." The work, which has been in progress for four years, grew out of Dr. Rea's interest in the late eighteenth century history of British West Florida—an area encompassing parts of present day Alabama. He has published a number of articles about the region and recently wrote a lengthy introduction to an eighteenth century book by Phillip Pittman on the status of the nearby European settlements on the Mississippi River.

"... a lot of trashy historical writing around today ..."

Writing quality historical material can absorb a great deal of time and therefore shouldn't be subjected to the rigors of "publish or perish," Dr. Rea points out. He believes that universities requiring professors to publish (a discipline somewhat alien to Auburn) might be partially responsible for "a lot of trashy historical writing around today." In fact, some of the best books take twenty years to write, he claims. His own *The English Press In Politics 1760-1774* (1964) received high praise in the scholarly arena, and a collaborative work written with now Vice President for Academic Affairs Taylor Littleton, *To Prove a Villain* (1964), a study of the fall of Richard III in the Shakespearean context, achieved some popular success. So even if Dr. Rea were working elsewhere, he would hardly "perish." His emphasis, as usual, is qualitative.

He did undergraduate work at Friend's University in Wichita, Kansas and earned both his master's and doctorate degrees at Indiana University in Bloomington, finishing it all in 1950. Before coming to Auburn, he earned extra cash by reviewing books for *The Washington Star* and the *Library Journal* (for which he presently writes), and still is an omnivorous reader, averaging—according to campus gossip—some five outside books a week "for recreation." Like most rumors, this one sounds exaggerated; but, in the case of Dr. Rea, one would be safer believing it than not.

Auburn Alumnalities

'16-'22 Perry J. Edwards '16 has moved from Atlanta to Nashville, Tenn. . . . W. A. Guess '18 now lives in Riviera Beach, Fla. . . . Mrs. Alma Stoves '19 was recently featured in the Auburn Bulletin. Mrs. Stoves, an avid football fan, saw her first Auburn game in 1913 and has only rarely missed a game in the last 25 years. . . .

Earl Lasater '22 recently retired from Alabama Gas Co. after 40 years. He and his wife Mary recently celebrated their 50th wedding anniversary. They have two daughters, Mary Nell who lives in Auburn where she and her husband, Tom Immler, own the Villager Frame Shop; and Leona, who lives with her husband Hal in Pittsburgh. The Lasaters continue to live in Birmingham. . . .

George A. Muths, Jr., '22 now lives in Houston, Tex. . . . Fred W. Osborn '22 now lives in Decatur.

'26-'28 Marion E. Boriss '26 has moved from Shreveport, La., to Ormond Beach, Fla. . . . Joe H. Lamb '26 lives in Wiliston, Fla. . . . George B. Stoves '27 has retired after 40 years in the theatrical business. He left Waters Theatre Co. of Birmingham and is now at home at Yarbrough Beach. . . .

Richard D. Yarbrough '27 has moved from Jackson, Miss., to Mesa, Ariz. . . . F. L. Williamson '27 now lives in Atlanta. . . . Joe F. Hixon '27, division rural engineer with Alabama Power Co. in Montgomery, has received a plaque for his years of dedicated service to the dairy youth of central Alabama. He received the plaque at the Montgomery Dairy Show. . . .

Col. James H. Price '28 now lives in Bartlett, Tex.

'29-'33 Andrew L. Smith '29 now lives in Orrville. . . . William L. Peavy '30 has moved to Coveseville, Va. . . .

Henry Reeves '30 is new chairman of the board and chief executive officer of Hercules Canada Limited with the company's main offices in Montreal. He has served in various European offices of the

firm and was made area director of the Intercontinental Division in 1967. . . .

P. C. Avant '31 celebrated his 40th year with Atlanta Gas and Light Co. in September. He is director of operation and technical services. He and his wife Edith have one son and two grandchildren. . . .

Benjamin M. Dempsey '31 now lives in Eufaula. . . . Bela T. Richey '31 lives in Talladega. . . . Daniel N. Garrett '31 has moved from Scarborough, N.Y. to Pinehurst, N. C. . . .

Jefferson C. Arant '33 of Warner Robins, Ga., recently sold The Furniture Mart Inc. (which he organized with a friend in 1951) to the Haverty Chain and thought he would have time to fish and hunt. But the Penny Pincher's Shopp, Inc., which he and his partner had opened on the side is continuing to grow and now he says he will franchise the name and open stores all over Georgia. Mr. Arant calls Auburn his second home because he has two sisters (Miss Anamerle Arant '26 and Mrs. John Goodman '29) and a brother (Dr. F. S. Arant '26) here. . . .

Lee M. Becton '33, D.V.M., has

late the interconnections between facts. "I believe very, very firmly that there's no particular merit in simply memorizing facts. They must be evaluated, related to one another, applied to historical situations," he says, justifying the extra time he and his assistants spend grading papers.

**'No particular merit
in simply memorizing
facts'**

On the advanced level, Dr. Lewis offers expanded, in-depth technology and civilization courses every other year. During the alternate year he schedules some unusual social and intellectual history courses, including a study of reform movements—such as the women's rights movement in the last century—and a study

of "popular culture"—the common man's reaction to social trends.

"It's fun to see how similar Gloria Steinem and Betty Friedan are to some of the nineteenth century feminists, like the ones who drafted the 'Women's Declaration of Independence' in 1848. There are remarkable similarities between the spirit of the past decade and that of the 1840's and 1850's," he says. The "Women's Declaration," he adds, indicted "man" for all the atrocities originally attributed to George, III, a type of activity generally not associated with the Victorian Age.

A traditional scholar might question some of the subject matter covered in Dr. Lewis' "Concepts of Popular Culture" class. There, students and professor explore the world of popular literature, music, television, sports, and other "non-academic" cultural phenomena. The class learns, for example, that "The Wizard of Oz" was a satire on social conditions in the 1890's as were many of the works of the period, the allegorical meanings of which shed new light on the common man's view of his world.

The class also considers children's books—such as the Hardy Boys, Nancy Drew, and Tom Swift series—finding in them a pattern of public values and speculating on their impact during the first half of the present century. Other topics discussed include the ideas of Marshall McLuhan on the role of mass media in modern culture, the impact of machines such as the Model-T Ford on American society, and the way motion pictures and popular songs mirror the concerns of the public in the different decades of the twentieth century.

Science fiction too finds its

way into some of Dr. Lewis' classes. Its value as a gauge of popular reaction to technology is the focus of study. "Science fiction illuminates many of the questions and concerns of students who have grown up in the post-Sputnik era and who realize that many of the changes that affect their lives most profoundly have resulted from scientific and technological developments," he commented in an essay appearing in *The Auburn Plainsman* last spring. In one of his current classes, he traces the historical background behind the works of Jules Verne, H. G. Wells, Robert Heinlein, and Arthur C. Clarke, among others.

Out of the classroom, Dr. Lewis is a blur on the sidewalk, a friendly blitz on the telephone. He moves through a thicket of "extra" activities ranging from service as senior warden, organist, and choirmaster of Holy Trinity Episcopal Church to researching the records of Delta Airlines (see accompanying story on Dr. Wesley Newton.) Some of his spare time must also be allocated to the compilation of scholarly presentations, his duty as national program chairman of the Society for the History of Technology. But the fast pace, which parallels his Pennsylvania accent, never fails to melt into a leisurely "there's always time to talk" attitude as soon as students meet him for discussion of course related matters or, as he puts it in his syllabus, "any topics of individual interest."

"Yes, I'm extremely busy and extremely happy. My career has finally jelled. I wouldn't want to do anything else, and I'm truly grateful to Auburn for providing the means."

Dr. Lewis' "good life" at Auburn came after nearly two de-

cadecades of nomadic study and a variety of academic appointments, none of which yielded the satisfaction of his present situation. Originally aspiring to the Episcopal clergy, he finished undergraduate work at Pennsylvania State University in 1952 and earned his master's in history there in 1954. "I discovered I would rather teach than preach," he comments, regarding his decision not to enter Virginia Theological Seminary.

After a three-year period teaching public speaking, his minor, at a small private school in upstate New York, he entered Cornell University where he was one of the first three doctoral students to study under Dr. David Brion Davis, who has since won a Pulitzer Prize for his work in social and intellectual history. In his first post-doctoral position at the Hagley Museum in Wilmington, Delaware, Dr. Lewis directed a graduate program in industrial history set up through a grant from the DuPont Company. Prior to accepting a chair at Auburn in 1971, he taught at the State University of New York at Buffalo during the worst of the "campus unrest." Dr. Lewis sympathized with some of the dissent but "couldn't abide the tactics" adopted by the activists. "When you see force being used to prevent free speech, when picket lines prevent one from getting into a classroom building to teach, when it becomes necessary to call police on campus because of violence . . ."

Dr. Lewis doesn't like to dwell on it. Instead he talks about his satisfaction in Auburn where he has found an outlet for most of his interests, professional and avocational, and where his "cautious optimism" blends well with the campus atmosphere.

Faces in The News

Bozeman

Nolen

W. O. Bozeman, Jr., '38 is new vice president of contract finishing sales for Russell Mills, Inc., in Alexander City. He was chairman of the Southeastern Section of the American Association of Textile Chemists and Colorists in 1968-69. He and his wife have one daughter.

Woods Whatley '50 of Atlanta; four sisters, Mrs. J. A. Vines '27 of Opelika, Mrs. Annie Mullins of Columbus, Mrs. Leta Edsell of Montgomery, and Mrs. L. B. Gladish of Chattanooga.

Frank Madison Barnett '21 of Fitzpatrick died in a Birmingham hospital on Sept. 15 after an ex-

Bentley Bequest

Aids Home Ec

A \$5,000 bequest from the estate of Dr. Alma A. Bentley '26 will establish a loan fund for freshmen and sophomores in home economics at Auburn.

Dr. Bentley was state supervisor of home economics in South Carolina for many years before her death in 1970. She had taught home economics in Alabama schools and at Winthrop College in South Carolina where she was head of home economics education.

Dr. Bentley held the M.S. from the University of Tennessee and the Ed.D. from Columbia University.

In 1962 she was named Woman of the Year by the *Progressive Farmer Magazine*.

For her many achievements at both the state and national level, Dr. Bentley was awarded posthumously the certificate of recognition by the National Association of Vocational Home Economics Teachers.

tended illness. He had been Wilcox County Extension Agent until 1963. Survivors include his wife, Mrs. Virginia Smilie Barnett; 2 sons, Dr. Robert V. Barnett of Birmingham and Frank M. Barnett, Jr., '53 of Orlando, Fla.; 2 brothers, Andrew H. Barnett '14 of Florence, and A. V. Barnett, Monroeville; 2 sisters, Mrs. Robert Dennis of Monroeville and Mrs. O. F. Jefferies of Murphy, N.C.

Robert O. Atkins '22 of Heflin died May 8 after suffering a massive stroke on Dec. 28. Survivors include his wife; 3 daughters, Mrs. Ralph Murphy and Mrs. Joseph McDade, both of Atlanta, and Mrs. Edward Feuerlein of Cincinnati, Ohio; and 7 grandchildren.

Horace G. Williams '23 of Flagler Beach, Fla., has been deceased for several years according to information recently received in the Alumni Office.

Robert Anderson Tuck '23 of Centre died December 31, 1963, according to information recently received.

Dr. Franklin Ashton Clark '23 of Andalusia died Sept. 25. He was with the State Health Department in 1924-25, with the U.S. Public Health Service from 1926-1943 and taught in the School of Veterinary Medicine at Auburn from 1943 to 1956. Survivors include a sister, Mrs. Irene C. Adams of Andalusia; and two brothers, Dr. A. B. Clark of Harrison, Ark., and Dr. A. F. Clark of Leesburg, Fla.

Felston Mullins '25 died July 23. He was vocational agriculture teacher at Fairview High School in Cullman County from 1925 until his retirement in 1962. After retirement he managed his farms and other business interests until his death. Survivors include a daughter, Sarah Ellen of Nashville, Tenn., and 2 sisters Miss Louise and Miss Sue Mullins of Jacksonville, Fla.

Aubrey P. Cotton '25 of Sumter, S.C., died suddenly on Aug. 24.

Lewis C. Worthington '25 of Birmingham died Oct. 16. He is survived by his wife, Mrs. Margaret Worthington; a sister, Mrs. Onie Stallings; and a niece, Mrs. Tommy Mosley, all of Birmingham.

Joseph Ernest Whitfield '26 of Harlan, Ky., died August 10. He spent most of his career with Harlan Collieries in Brookside, Ky. After leaving Harlan Collieries he was self-employed as an engineer and from 1964 until his death taught drafting at Harlan Vocational School. Survivors include his son, Joe Whitfield, Jr., of Oil Town, Pa., and a brother, Dr. Bryan W. Whitfield '14 of Murphy, N.C.

Ben P. Curtis '27 died Oct. 20 in a Birmingham hospital. He is survived by his wife, Mrs. Sarah Curtis; 2 daughters, Capt. Bennie Sue Curtis of Birmingham and Mrs. Horance G. Solomon, Jr., of Huntsville; one stepsister, Mrs. H. D. Alexander of Auburn, and three grandchildren. Since retiring from U.S. Steel, he had been associated with the Alabama Cattlemen's Association, American Farm Bureau Federation and the Birmingham Area Chamber of Commerce.

Hampden C. DuBose '28 of Dallas, Tex., died April 16. He had liv-

ed in Dallas since 1928. Survivors include his wife, Mrs. Frances DuBose.

Horace Keller Weaver '29 of Birmingham died Oct. 24. He is survived by four daughters, Mrs. Robert Long of Florence, Mrs. Bess Moore, and Mrs. Donald LaBrot of Denver, Colo., and Mrs. Richard Zeski of Birmingham; 2 sons, H. Keller Weaver, Jr., and Nelson E. Weaver, both of Birmingham; his parents, Mr. and Mrs. Horace M. Weaver of Springville; and a sister, Mrs. E. Weaver Jones of Birmingham.

Perry B. Owen '29 of Ashland died May 17. Survivors include his wife, Mrs. Lois S. Owen of Ashland.

Buford Logan Martin '29 of Ozark died July 19. Survivors include his wife.

Norman S. Illeges '30 died July 31 according to information received in the Alumni Office.

Ruth Dobyne Hightower '30 of Athens is deceased according to information received in the Alumni Office.

Lanier C. (Pard) Lively '31 was killed in a car wreck in Dunmore, W. Va., on Sept. 30 where he was on a hunting trip. He had retired from Gulf Power Co. last spring. Survivors include his wife, Mrs. Opal Lively; 2 sons, David and James, and a daughter, Carolyn.

T. Holt Leach '31 of Gadsden died Sept. 9. He was founder and president of Lemanco Mfg. Co. in Gadsden. He is survived by his wife Mattie and son Barney.

Eugene B. Robertson '32 of Montgomery died Aug. 8.

Andrew Jackson Killebrew '32 of Livingston died Sept. 16. Survivors include his wife.

Clarence Osler (Mac) McNees '35 of Birmingham died on Jan. 1 in a Birmingham hospital. He coached football, basketball, and boxing for several years and since 1938 had been in the life insurance business. Survivors include his wife, Erna Ruth of Birmingham; a son, Charles and granddaughter Susan of Fresno, Calif.; a daughter, Linda of Alexandria, Va.; 3 brothers, and 4 sisters.

William Letford '36 of Evergreen died on June 12, 1971, according to information recently received in the Alumni Office.

Louise Houk Collins '37 of Troy died recently. She was a professor of English at Troy State for about 15 years. Survivors include a son, Capt. James A. Collins '64 of Dayton, Ohio; her mother, Mrs. Ester S. Houk; a brother, Robin H. Houk, both of Montgomery.

William S. Fair, Jr., '38 of Mauldin, S.C., died June 4. Survivors include his wife.

Albert F. Arruzza '38 of Stamford, Conn., is deceased according to information received in the Alumni Office.

John Lavette Baswell '39 of Birmingham died July 21. Survivors include his wife.

Robert Lee (Bob) Mundhenk '40

of West Point, Ga., died of a heart attack on Aug. 2. He was vice president and general manager of Batson Cook Foundry in West Point. A retired Navy captain, he was a graduate of Annapolis. Survivors include his wife Mrs. Virginia Adams Mundhenk '40; 2 sons Robert A., and Phillip L. Mundhenk, both of West Point; and a sister, Mrs. Gretchen Gifford of Summit, N.J.

Bernard M. Crow '40 of Fort Payne died in August. He is survived by his wife, Mrs. Ruth Crow; mother, Mrs. J. O. Crow, Sr., of Fort Payne; brothers, Paul and J. O., of Fort Payne, and Durward of Washington, D.C.; and sister, Mrs. Louise Van Allen of Fort Payne.

James Hubert Keller '41 of Luverne died Oct. 27. Survivors include his widow, Mrs. Velma Keller of Luverne; a son and daughter, and a sister and a brother.

James Austin Jones '42 of Mobile died July 28 following an illness of 2 weeks. He was value engineer of the 5-state Mobile District of the Army Corps of Engineers. He did graduate work at the California Institute of Technology and the University of Virginia and taught civil engineering at Auburn 1947-1955. He was in private practice until 1962 when he joined the Corps of Engineers. Survivors include his wife, Gray Branson Jones '48, son James Austin Jones, Jr., '74 and daughters, Elizabeth, a junior at Mastin School of Nursing, and Emilie, a freshman at Faulkner State.

Frances Vick Davis '45 died Aug. 9 in Tuscaloosa following a three-week illness. She was guidance director at Fayette County High School. A member of numerous educational and professional organizations, she was president of the Alabama Personnel and Guidance Association in 1968 and was listed in the 1966 edition of Who's Who of American Women. Survivors include her husband, Wilbur C. Davis '50; her parents, Charles and Lillian Burton Vick of Fayette; a son, Charles; and 3 daughters, Mrs. Kathy Davis Wright, Martha Lillian Davis, and Frannie Davis.

Dr. Claude Edward Wood, Jr., '45 of Birmingham died Aug. 18.

(Continued on Page 13)

Dr. Paul Scheid Dies Suddenly

Dr. Paul W. Scheid, professor of English education at Auburn for the past 16 years, died suddenly Oct. 27. He was attending the Auburn-Houston game at Auburn when he was stricken.

Dr. Scheid is survived by his wife, Mrs. Margie Scheid; one brother, Edward C. Scheid of Sandusky, Ohio; and two sisters, Miss Edna Scheid of Sandusky and Mrs. James Miller of Coronado, Calif.

He held degrees from the University of Miami (Ohio), Duke, and Ohio State. He had been a Fulbright Scholar at the University of Punjab Lahore, Pakistan, and director of a Scandinavian-American Seminar for Graduate Study.

A Paul Scheid Student Scholarship for English Education is being established in the School of Education to which contributions may be made.

IN MEMORIAM--Continued

Survivors include his wife, Mrs. June Wood; a son, Claude Edward, III; 2 daughters, Miss Barbara Elaine Wood and Miss June Massey Wood, father, Claude E. Wood, Sr.; brother, Ronald L. Wood '64, and sister, Miss Joyce Ann Wood, all of Birmingham.

Estate Money

(Continued from page 3)

very fine research now being done by our faculty in the School of Veterinary Medicine. Our long-term plans have not yet been finalized, but we would anticipate that a number of projects can begin immediately based on the research already under way in this area of study.

"I think we can anticipate further that this program will attract support from other public and private sources, so that Auburn will eventually become a major center for research on diseases which are common to small animals," Dr. Philpott added.

"Some of the initial research to be undertaken will be in comparative neurology," Dr. Philpott stated, pointing out that Dr. B. F. Hoerlein who heads the Department of Small Animal Surgery and Medicine is widely acclaimed for his work in this area of study. "Later, we will broaden into other areas of specialization," he added.

An advisory committee from within the School of Veterinary Medicine will review and act on proposals for grants for research from the funds. "All research carried out with Ritchey research funds will be designed to support the teaching effort and to enliven as well as to furnish enlightenment into the discipline within the science," Dr. Philpott stated.

"Since earnings of the estate vary with economic conditions, monthly income to Auburn cannot now be accurately estimated. However, research will move forward as rapidly and completely as available funds allow," he added.

The late Miss Ritchey left her estate to the Auburn Research Foundation to support the School of Veterinary Medicine for research in diseases of small animals. Her will stipulated that Auburn would receive the estate, then valued at approximately \$4.5 million, after care was provided by Auburn for some 150 dogs she had maintained on a 12-acre ranch near Ft. Lauderdale, Fla.

Several relatives contested the will in 1968, plunging the matter into the courts where it has remained until the latter part of September. In the meantime, the value of the estate has tripled.

Under terms of a settlement approved by the court, three legal heirs received five per cent each of the estate. The share Auburn is ultimately to receive now has approximate value of \$9.5 million.

The courts have also decreed that Auburn may now begin to receive the amount of earnings on the estate which is not needed for the care of the dogs. There are now 75 dogs on the ranch, all under full care of caretakers and a veterinarian. University officials say there are no plans at present to change this set-up.

Charles L. Breedlove '48 of Prattville died Sept. 28 of cancer. He was former chief administrator for the State Milk Control Board and had been active in state agricultural affairs, including work with the Farm Bureau Federation. He had been in private business for the last two years. Survivors include his wife, Helen Morton Breedlove; 5 children; and 3 grandchildren.

Herman L. Lessley '48 of Huntsville died in July, 1967 according to information recently received in the Alumni Office. Survivors include his wife.

Robert L. Hawkins '49 of Birmingham died of cancer on July 23. He was superintendent of the construction department of Stockham Valves and Fittings. Survivors include his wife, Mrs. Nancy Hawkins; daughters, Carolyn and Jan; son, Charlie, and his mother and a brother.

Max J. Howard '49 is deceased according to recent information. Survivors include a brother, Kenny Howard '48 of Auburn.

Robert Perry Houk '55 of Memphis, Tenn., died of a heart attack on Aug. 13. He was a veterinarian.

George Howard Hill, Jr., '59 of Decatur was killed in an automobile accident in Walker County on Aug. 14. He was plant manager of the Ingalls Iron Works marine division in Decatur. Also injured in the wreck were his wife and year-old daughter Kristy. Survivors include his wife, Mrs. Patricia Scott Hill; 3 daughters, Kelley, Karen, and Kristy of Decatur; his parents, Mr. and Mrs. G. Howard Hill, Sr.; grandmother, Mrs. H. A. Wynne; 2 sisters, Mrs. James Atkinson, and Mrs. Leonard Gavin, all of Birmingham.

Arthur Leslie Little '60 of Birmingham died on Aug. 7. Mr. Little was manager of the electrical design section for substations with Southern Services, Inc. Survivors include his wife.

Maj. Donald B. Campbell '60 was killed in action on July 28, 1968, in Vietnam. He was serving with the Marine Corps and was buried in Arlington National Cemetery. Survivors include his parents, Mr. and Mrs. Frank J. Campbell of Clifton, N.J.

Capt. Robert W. Jacobs '69 died as a result of injuries sustained when an airplane, on which he was radar intercept officer, crashed while landing in Naples, Italy, on Sept. 27. Survivors include his parents, Mr. and Mrs. R. W. Jacobs of Birmingham.

Sharon York O'Grady '69 of Montevallo died Oct. 14. Survivors include her husband Michael E. O'Grady of Montevallo.

Vernon V. Cook '71 of Montgomery died at his home during August. Survivors include his wife, Mrs. Ann Wallace Cook; his mother, Mrs. Mary Elizabeth Cook of Montgomery; father, Vernon V. Cook of Graceville, Fla.; one son, Cliff Vance Cook; three sisters, Mrs. Tommy Giles, Mrs. Robert Henderson, and Mrs. Raymond E. Culpepper, all of Montgomery.

Robert Lawrence Davis '73 of Prattville was electrocuted Sept. 17

INDUSTRY AIDS CIVIL ENGINEERS—A group of industrialists visited the Auburn campus recently to view plans for modifying the hydraulics laboratory in the Department of Civil Engineering. All have contributed materials to the project. In a visit with President Harry M. Philpott, center, were Frank Hopson,

III, Alabama Engineering and Supply Co.; Ted R. Cremer '40, U.S. Pipe and Foundry Co.; Dr. Philpott; Grover M. Campbell '47, Chicago Bridge & Iron Co.; Cecil C. Spear, Jr., '57, Alabama Engineering and Supply Co.; and Dr. Rex K. Rainer, head of the Department of Civil Engineering.

ALUMNALITIES--Continued

tist Sunday School Board in Nashville, Tenn.

'54 Lt. Col. Joseph S. Wood, Jr., is stationed at the Pentagon. . . . **Jean Gibbons Byrd** of Dora received a Master of Music Education from the University of Montevallo in August. . . .

David J. Irvine recently had an article, "Specifications for an Educational System of the Future," reprinted as a chapter in *Foundations of Futurology in Education*, edited by Richard W. Hostrop. Dr. Irvine is chief of the Bureau of School Programs Evaluation for the New York State Education Department.

Dr. Walter H. Grimes, vice president of research and development for Chemagro, was one of 14 American scientists to participate in a symposium of pest management in Kiev, Russia, in September. Dr. Grimes presented a paper at the conference, coordinated by the USDA and the USSR Ministry of Agriculture. . . .

at Central Alabama Electric Cooperative's Statesville substation. He was an electrical engineer with the company. He is survived by his wife, Jean McGee Davis; his parents, Mr. and Mrs. R. G. Davis, Sr., '49 of Stanton; one brother, Nickie Davis of Auburn; parental grandparents, Mr. and Mrs. R. H. Davis of Stanton; and maternal grandmother, Mrs. Irene Lawrence of Maplesville. . . .

Susan Kate Rainer '73 died Oct. 6 as a result of a home accident which had occurred about a month before. She was a freshman at the University of Alabama School of Dentistry in Birmingham, where her husband is a sophomore. Survivors include her husband R. Kelly Rainer, Jr., '70; and her parents, Mr. and Mrs. Edward B. Kate of Fort Lauderdale, Fla. A scholarship fund in her memory has been established at the Dental School.

Lt. Col. and Mrs. Robert H. Gracey, Jr. (Margaret Harbor) and daughters have returned to the States after a two-year assignment in Korea. They live in Blytheville, Ark. . . .

Lt. Col. and Mrs. Gaston O. Bush (Elizabeth Pepperman '61) live at Mather AFB, Calif., where he is chief of quality control and aircraft maintenance, and flies the Boeing 737.

Russell Winn '54 works with the government in Huntsville. He and his wife have four children. . . . The Rev. Charles C. Brock is new pastor of First Baptist Church in Calhoun City, Miss. He and his wife Frances Taylor '55 moved to Calhoun City from Gulfport, Miss., where he had been at Grace Memorial Baptist Church for 8 years. . . .

Jerry D. Parker recently joined Standard Electric Co. in Rocky Mount, N.C., as vice president and general manager. He had been vice president for operations for Phillips Petroleum's Puerto Rican subsidiary, Fibers International Corp. He and his wife Dean have three children: Jerry, a student at Wake Forest; Lynn, a senior in high school; and Cathy, a junior high student.

'55 M. Nolan (Mickey) Brown is cargo freight manager for Transworld Air Lines in San Francisco. . . . **Helen Allen Meador** lives in Nashville, where her husband, Dr. Clifton Meador, is professor of medicine at Vanderbilt University. . . .

Lt. Col. and Mrs. Leroy G. Twilley (Valda Jo Ivey) and family are now in Korea where he is stationed with the Army. . . . **Nell Winn Foshee** and her husband, Dr. Philip Foshee, live in Clanton with their 4 children. . . .

Mary Jeanette Capps Schooler is currently in Indonesia where her husband is with Caltex Petroleum Corp. Daughters Nia, 17, and Judy, 14, are in school in Singapore. Son Robert, 10, attends a company school on the island of Sumatra.

Mrs. Schooler has been teaching high school English for the past several years at Rangely, Colo., but intends to be unemployed while she is in Indonesia.

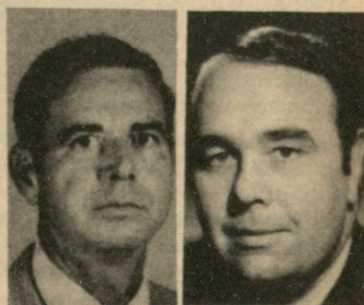

'56 Alton C. Shell, head coach at Americus (Ga.) High School. . . . **Ron E. Hogan**, Hogan & Alhauser Engineering, Loveland, Colo. . . .

Mr. and Mrs. Harold C. Weathers (Helen Mason) live in Athens, Ga. Helen received an M.Ed. from the University of Georgia in August and is head teacher at Burney Harris Middle School in Athens. Harold is manager of Atlanta Gas Light's Athens district. They have three children: Karol, 16, Kathy, 14, and Hal, 5. . . .

Nancy Boyd Stubbs, assistant professor of physical education at Wichita State University. She recently received her doctorate in physical education from the University of Tennessee. . . .

Edward F. Williams, III, Tennessee state representative, has been named to the National Legislative Conference Natural Resource Task Force. . . . **Ronald Martin Grant**

Faces in The News

Knight

Doherty

James H. Knight '56 is new assistant to the vice president of contract finishing sales with Russell Mills, Inc. He, his wife, and 3 daughters live in Alexander City.

Joseph J. Doherty '58 is now corporate director of merchandising for Owens-Corning Fiberglass Corp. in Toledo, Ohio.

NATIONAL HONOR—Dr. Reginald I. Vachon '58, often cited for his work in teaching and research, has been awarded the G. Edwin Burks Award by the American Society of Engineering Education as the nation's outstanding educator in mechanical engineering. Earlier this year, the Auburn Alumni Professor was awarded the Western Electric Fund Award as the outstanding mechanical engineering teacher in the southeastern region of ASEE.

NASA Honors 31 AU Alumni

Thirty-one Auburn alumni working at Marshall Space Flight Center at Huntsville have been recognized for their work in the space program by the National Aeronautics and Space Administration (NASA). One received the "Exceptional Service Medal" for his work with the Apollo lunar landing program; eight received "Director's Commendations" for their work in the development of Skylab; and the other 22 were recognized for their work on Skylab, the first manned space station, which was launched in May for a period of experimentation and research.

'Exceptional Service'

F. L. Williams '51, employed in the Saturn Program Office at Marshall Space Flight Center, received NASA's "Exceptional Service Medal" at ceremonies on April 6 lauding him for "outstanding contributions to the Apollo lunar landing program."

Director Commendation

The eight alumni receiving the "Director's Commendation" include: Fletcher Folks '50, program analyst. He and his wife, Mildred High '50, have two children: Pamela, 16, and Michael, 13.

Charles Harold Chambers '49, aerospace engineer. He and his wife Elsie Jean, have two children: Charles, Jr., a student at Auburn, and David, 16.

Milton Herrin '58, an aerospace engineer. He and his wife Sylvia have two children, Emily, 2½, and Milton 1½.

Earl Calvin Deuel '49, aerospace engineer. He and his wife Mildred have four children: Betty, Raymond, Margaret, Traglia, and Brenda.

William Howard Evans, Jr., '59, aerospace engineer. He and his wife, Sarah Ann Thompson '59, have four children: Julia, 12; William, III, 7; David, 6; and Mariann, 3.

Richard Middleton Acker '61, electrical engineer. He is married to Bonnie Webster '61. They have two children: Laura, 10, and Rebecca, 8.

John C. Stephens '62, mathematician. He and his wife, Ann, have a son, John David, 10.

Joe Bob Davis '62, aerospace engineer. He and his wife Paulette have three children: Joe, 12; Jerry, 11; and Cynthia, 10.

22 Alumni Recognized

The other 22 alumni recognized for work on Skylab include: John H. Lowery '61, electrical engineer; Walter T. Mitchell '59, supervisory aerospace engineer; James L. Etheridge '57, chief of radio frequency systems section; Emmett C. Nash '59, electrical engineer; Dewey R. Channell '63, electrical engineer; Russell M. Mattox '66, aerospace engineer; Lawrence L. Lynch, Jr., '70, aerospace technologist; Charles R. Darwin '58, chief of systems engineering division; Robert L. Saidla '56, aerospace engineer.

George Butler, Jr., '48, chief of quantity and reliability engineering evaluation; Dr. James B. Dozier '50, member of the scientific staff; John Q. Miller '51, chief of the solid propulsion branch; James W. Poe '63, aerospace engineer; Johnny M. Oddo '65, electrical engineer.

Thomas Little '66, aerospace technician; Larry Bradford '69, aerospace engineer; James R. Graves '69, electrical engineer; Herbert Wiggins '41, aerospace engineer; Dr. Edgar H. Hopper '61, numerical analyst; John Thomas '60, chief of mechanical and controls systems; Cecil David Creel '60, flight systems engineer; Jewell Belcher, Jr., '59, aerospace engineer.

ALUMNALITIES--Continued

of Huntsville recently received an M.B.A. from Alabama A & M.

MARRIED: Martha Ann Perryman to Kenneth Earl Christianson. They live in Dothan.

'57 Maj. John E. Driver, satellite chief of supply at Holloman AFB, N. Mex. . . . F. Donald Gray, promoted to assistant controller of the consumer products division of WestPoint-Pepperell. He and his wife, Christine live in Langdale with daughters Leslie Maria, 6, and Julie Anne, 6.

Richard E. Mueller, new assistant chief of the engineering division of the Mobile Office of the Army Corps of Engineers. He and his wife Patricia have 2 daughters. . . . C. Pratt Rather, Jr., has joined First National Bank of Birmingham as vice president for special assignments. . . .

The Glomerata Office has 23 copies of the 1957 Glom for sale for \$6.50 each. Interested alumni can send checks for that amount to Glomerata, Student Affairs Office, Martin Hall, Auburn University, Auburn 36830.

Douglas C. Moring, with the U. S. Department of Agriculture in Thomson, Ga. . . . Hoyt O. Smith, promoted to division engineering manager of the printing products division of the 3M Co. in St. Paul, Minn.

Dr. Vernon B. Watwood, resigned as manager of the applied mechanics lab of the Franklin Institute in Philadelphia to become associate professor of civil engineering at Michigan Tech in Houghton, Mich.

Fob James, Jr., of Opelika is president of a new citizens group, Alabama Citizens for Transportation, formed to work for the development of a long-range transportation system for Alabama. . . .

John C. Dendy, now manager of design for Hughes Helicopter's new advanced attack helicopter program at Culver City, Calif. He and his wife and three children live on Palos Verdes Peninsula. He would like

to hear from older Auburn acquaintances at 6822 Locklenna Lane. . . .

Milton C. Russell, new vice president and controller for Steel City Bolt and Screw, Inc., in Birmingham. . . . Lt. Col. William P. Willette, operations officer in the AEI division at Ft. Lewis, Wash. . . . Mitchell L. Thompson, with Alcoa at Wayne, Pa. . . .

Lt. Col. Jerry Lindsey received an M.S. from the University of Southern Mississippi in August and began a tour with the Army in Germany on Oct. 1. . . .

Travis J. Cosby, Jr., is now associated with Merriam Insurance Agency. He and his wife, Ernestine, live in Panama City, Fla. . . . Daniel H. Stanford received an LLB from Jones Law School in Montgomery in August. . . .

Don P. Coughlin is with Stanley Furniture Co. in West End, N.C. . . . Robert F. Ledet is new general manager of the industrial papers division of International Paper Co. He, his wife, Jaquelyn Fort, and their two sons live in Weston, Conn.

'58 Joe M. Thompson, supervisor with Bibb in Columbus, Ga. He and his wife have four children.

. . . L. Don Bowen, supervisor of technical services in the rate department of Southern Services, Inc., in Atlanta. He and his wife, LaRose, have four children: Richard, Kathy, Vicki, and David. . . .

Gaines B. Adams, manager of international operations with International Playtex headquartered in New York City. He, his wife Faye Looser '57, and children Dan, Greg, and Alice live in Short Hills, N.J. . . . Mr. and Mrs. Douglas S. Lovelace (Marguerite Garner '60) live in Chester, Va. He is with Allied Chemical Corp. . . . Maj. Herman J. Boss, commander of the 3021st transportation squadron at Eglin AFB, Fla. . . .

Milton E. Adams received the M.B.A. from Southern Illinois University on June 24. . . . Frances Nicholson Byrd of Huntsville received the M.Ed. from Alabama A & M. on July 27. . . .

Joseph L. Camp is new director of the Atlanta area office of the Occupational Safety and Health Administration. He had been director of the Birmingham area office.

Campus Roundup

(Continued from page 3)

and in 1970 he was named Georgia Veterinarian of the Year.

Speech Head—Dr. Bert E. Bradley is the new head of the Speech Department. He replaces Dr. Frank Davis who is on leave. Dr. Bradley came to Auburn from the University of North Carolina. He published *Speech Performance* in 1967 and a second book *The Rhetoric of Speech Communication: The Credibility of Ideas* is currently in press.

Consumer Affairs—Dr. Barbara Spilker Stowe is the new head of the Department of Consumer Affairs in the School of Home Economics. She had been visiting associate professor at Michigan State during the past year and was research associate at North Carolina State in 1972. She succeeds Dr. Ruth Galbraith who became dean of the School of Home Economics spring quarter.

'59 Mr. and Mrs. William Howard Evans, Jr., (Sarah Ann Thompson) are back in Hartselle, where he is with NASA at Huntsville. They lived in Titusville, Fla., last year while Bill was on a special assignment with the Space Lab. The Evans' have four children. . . . Gerald G. McGlamery is assistant director of staff research to control pollution with TVA, located at the Muscle Shoals office. He is married to Barbara Goggins '61. . . .

The Glomerata Office has 82 extra copies of the 1959 Glomerata which they would like to sell before they move into new offices in January. They are available for \$6.50 each from Glomerata, Student Affairs Office, Martin Hall, Auburn University, Auburn 36830.

Edward J. Manning, CPA is a partner in the Fort Lauderdale, Fla., office of Ernst & Ernst. . . .

Glen L. Kenemer is plant manager of Advertising Display Corp.

in Dayton, Ohio. He is married to Joanne Gill '61 and they have 3 children: Steve, 13, Karen, 11, and Lisa, 6. . . .

Patricia Dodd Greathouse of Phenix City has been chosen as an Outstanding Elementary School Teacher. She teaches fifth and sixth grade English at Ladonia Elementary. She and her husband Robert who was recently chosen a Nabisco Outstanding Salesman, have two children: Mark Andrew, a freshman in business administration at Auburn; and Allen, a 7th grade student. . . .

Ellwell H. Elliott, Jr., is a partner in the new law firm of Harvey, Willard & Elliott in Decatur, Ga. . . . Lt. Cdr. William E. Owen is new commanding officer of the USS Los Alamos, the largest lift-capacity floating drydock currently in use by the Navy. He and his wife Beverly and children Stephanie, William, and Christopher, live in Dunoon, Argyllshire, Scotland. . . .

James W. (Jimmy) Grant, III, elected mayor of Dothan on Sept. 4. He and his wife have three children: Rosemary, 10, Wes, 12, and Gina, 4.

'60 Ruby Jo Roberson Faust, English teacher in Melbourne, Fla. She and her husband, William Faust, have three children: Susan, 12; Ben, 10; and Bill, 8; and live in Indialantic, Fla. . . . Robert Avery, with Sperry-Rand at Redstone Arsenal. He and his wife, Evelyn Wnuck '62, who also works at the Arsenal, live in Harvest, Ala. . . . James D. Selvey, field sales representative for Boise Cascade, based in Brandon, Fla. He and his wife, Sue, have three children. . . .

R. Donald Sledge, industrial engineer with WestPoint-Pepperell's Industrial Fabrics Division in Lanett. He and his wife, Margie, have two children: Roland, 20, and Tracy, 14. . . . Lt. Col. Richard D. Farris, on a tour of duty in Munich, Germany. . . . Winston W. Gardner, Jr. was recently appointed to the Brevard County (Fla.) School Board by the Governor. He resides in Titusville with his wife, Pat Henly '61, and two children: Buddy, 11, and Betty, 8. . . .

Alumni who would like to have a 1960 Glomerata can send a check for \$6.50 to cover the cost and mailing charges to Glomerata, Student Affairs Office, Auburn University, Auburn 36830. Some 100 copies are available.

Sidney H. Schell is with Pillans, Reams, Tappan, Wood, Roberts and Vollmer, lawyers, in Mobile. He is married to Roxie Ann Dickey '61. . . . Maj. Luther B. Ray, III, in Dhahran, Saudi Arabia, with the U. S. Military Training Mission. He and his wife, Patsy, have two children. . . . James A. Lindsey is assistant manager of the Lanett West Point-Pepperell mill. He and his wife, Jerrie, have four children: Howard Jeffrey, 14; James Wade, 12; Leigh Allyson, 10; and Kenneth Todd, 6. . . . William B. Garrison, with the Killearn Construction Division in Tallahassee, Fla. He is married to Anna Ruth Sasser '61. . . .

Lt. Col. Clyde A. Turner, III, assistant chief of staff, military intelligence, Arlington Hall, Va. . . . Marjorie Kirk Waldrop recently re-

ALUMNALITIES-Continued

ceived her master's in psychology from Louisiana State University and is presently teaching child psychology while working for a Ph.D. She and her husband, William R. Waldrop '61, live in Baton Rouge.

James Edward Reaves of Warrior received an M.Ed. from Alabama A. & M. in Huntsville on July 27.

BORN: A son, Ivan Blaine, to the Rev. and Mrs. John W. Clotfelter of Birmingham on Aug. 21. The Rev. Clotfelter is pastor of Green Acres United Methodist Church in Birmingham and Forest Hills United Methodist Church in Fairfield. He is a chaplain with the Birmingham Police Department Auxiliary.

'61 Andrew J. Powell, Jr., promoted to division industrial engineer for Burlington Industries in Greensboro, N.C. He and his wife, Ann, have three children: Dawn, 14; Drew, 13; and Dianne, 10. . . . Maj. John A. Baggett, student at the Army's Command and General Staff College at Fort Leavenworth, Kan. . . . Donald P. Hall, project engineer with Mobil Chemical Co. in Charleston, S.C.; working on his master's at the University of South Carolina. . . . Charles E. Blau, purchasing engineer with Carolina Eastman in Columbia, S.C. . . . Dr. John A. Britt, Jr., chairman of the new department of special studies and programs at Georgia College in Milledgeville. He will supervise the junior testing program there. . . . Capt. James R. Biddle, with the 327th Air Division. . . . James M. Bailey, home office representative for the Time Insurance Co., in the south Alabama and Florida panhandle area with offices in Mobile. . . .

Douglas Wasson, appointed chairman of the Kiwanis International Committee on Resolutions for 1973-74, is co-ordinator of religious activities for The Woodmor Corp. in Monument, Colo. . . . William R. Bendall, operations research analyst for the Army, STRATCOM, Ft. Huachuca, Ariz. He and his wife, Beth, have two children: Lisa, 13; and Barry, 10. . . . Grant Smith, new general manager of National Screenprinters, Inc. in Auburn. He and his wife, Sara, have two children: Charlotte, 14, and Sylvia, 9. . . . Molly Sarver Cleveland has just received her Texas real estate license and will sell for Duffy and LaRoe in Houston, Tex. . . . Don Kitt, new car sales manager for Key Cadillac in Minneapolis, Minn. He and his wife, Bette Harvard '62, have four children: Amanda, 7; John, 4; Allyson, 3; and Joseph, 2. . . . Frank Zipperer is working on his master's degree in data processing at George Washington University. His wife, Joyce Hopper, '62, is production manager for The Arlington (Va.) News. They live in Annandale, Va.

Roger Gary Martin received an M.Ed. from Alabama A. & M. on July 27. . . . Dr. Maxine Turner, with the English Department at Georgia Tech. . . .
